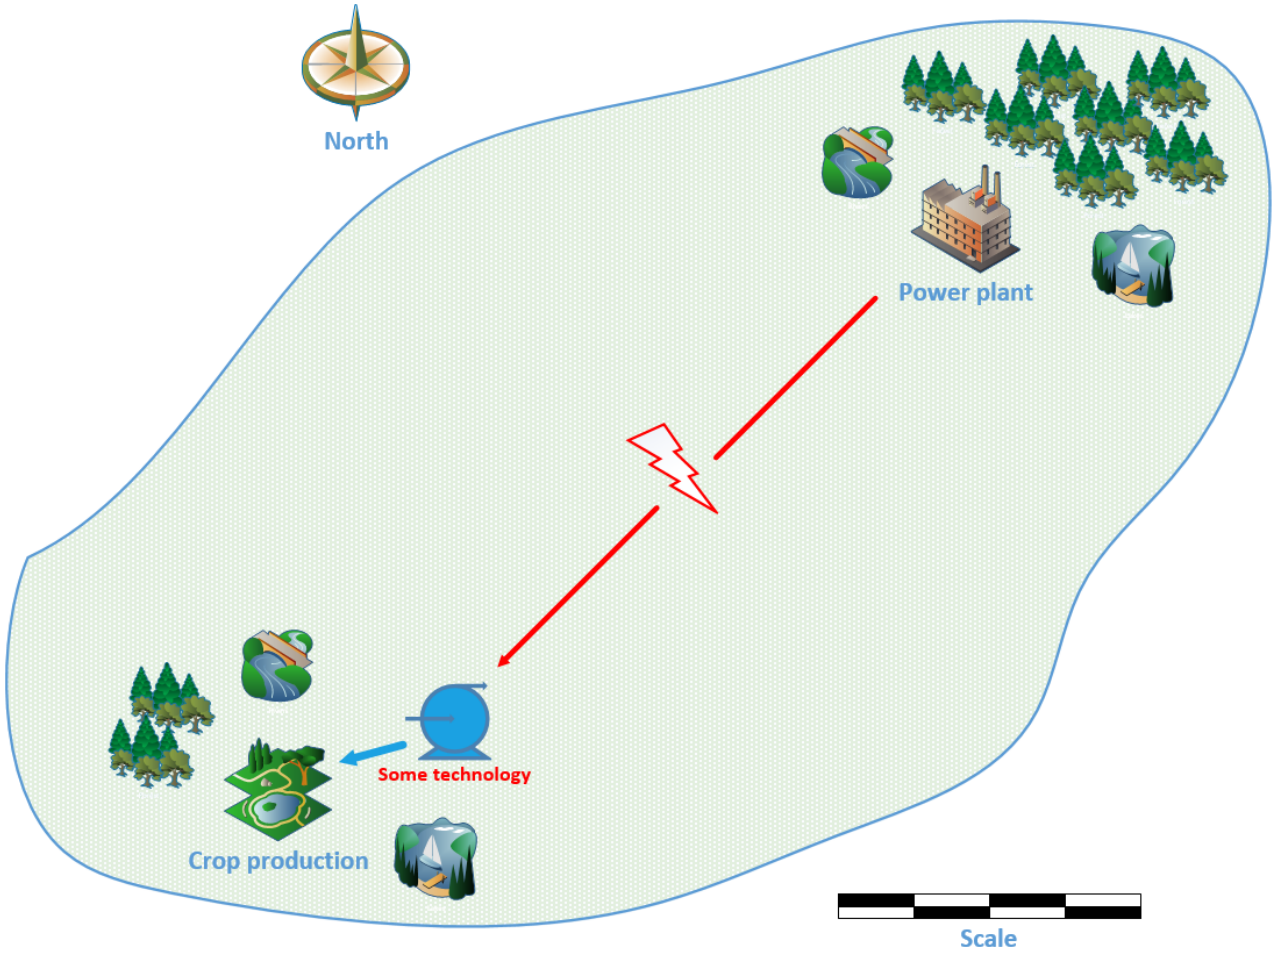
Water resources management: Environmental impact assessment and optimization

Outline

- Introduction
- Environmental Life Cycle Assessment (LCA)
- Mathematical optimization
- Ongoing research

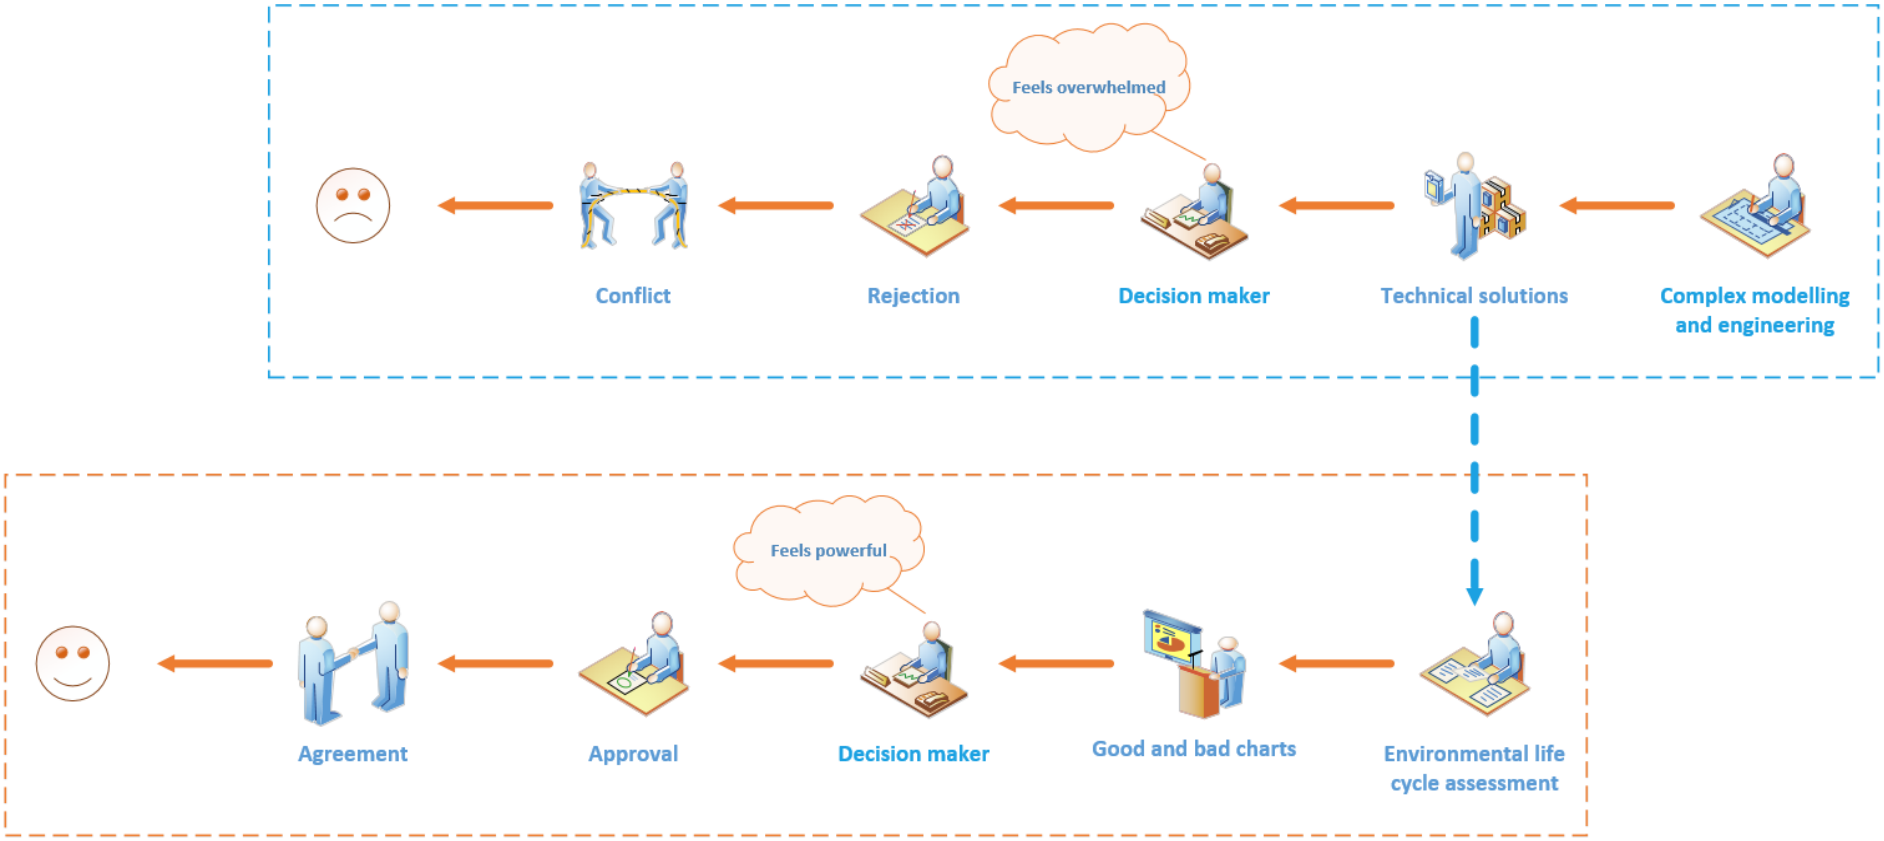
Introduction (1): Why impact assessment?

"Problem shifting":
Solving water issues by the cost of air pollution where electricity produced



Introduction (1): Why impact assessment?

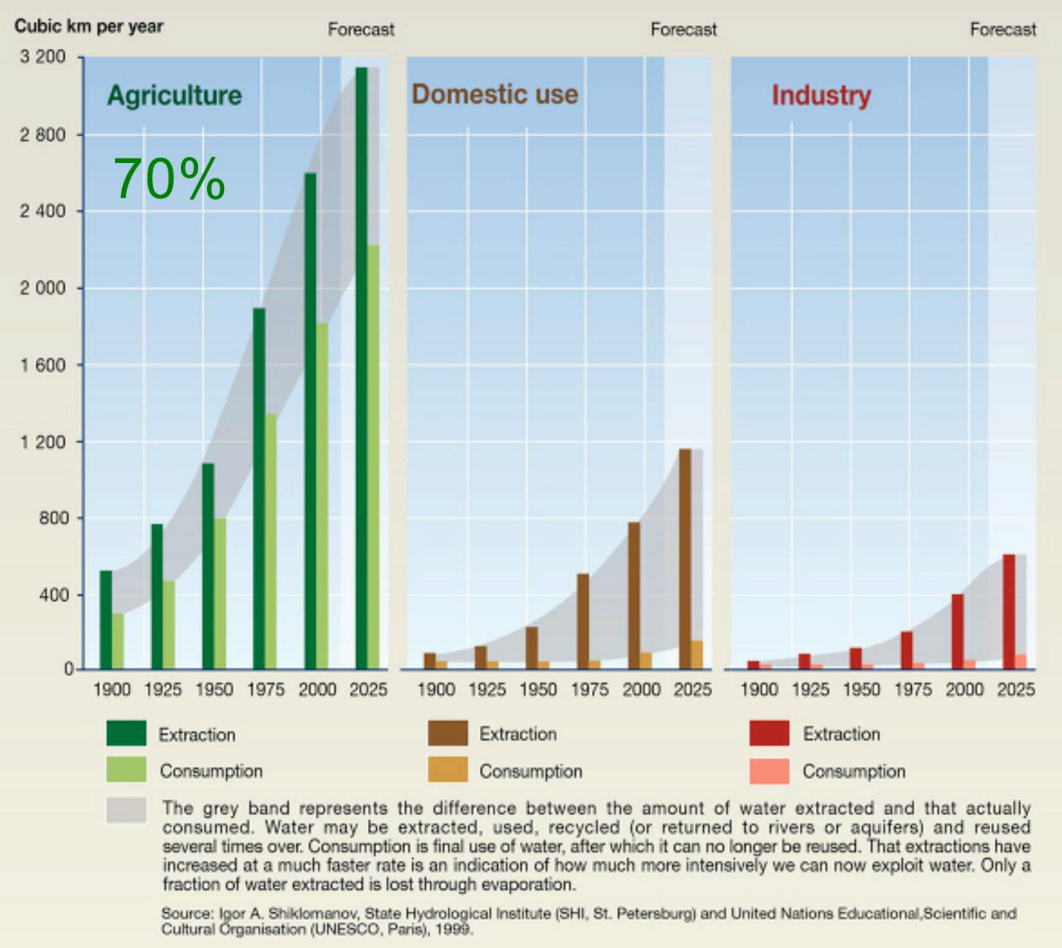
Comprehensive decision making and raising awareness:



Introduction (2): Why agriculture?

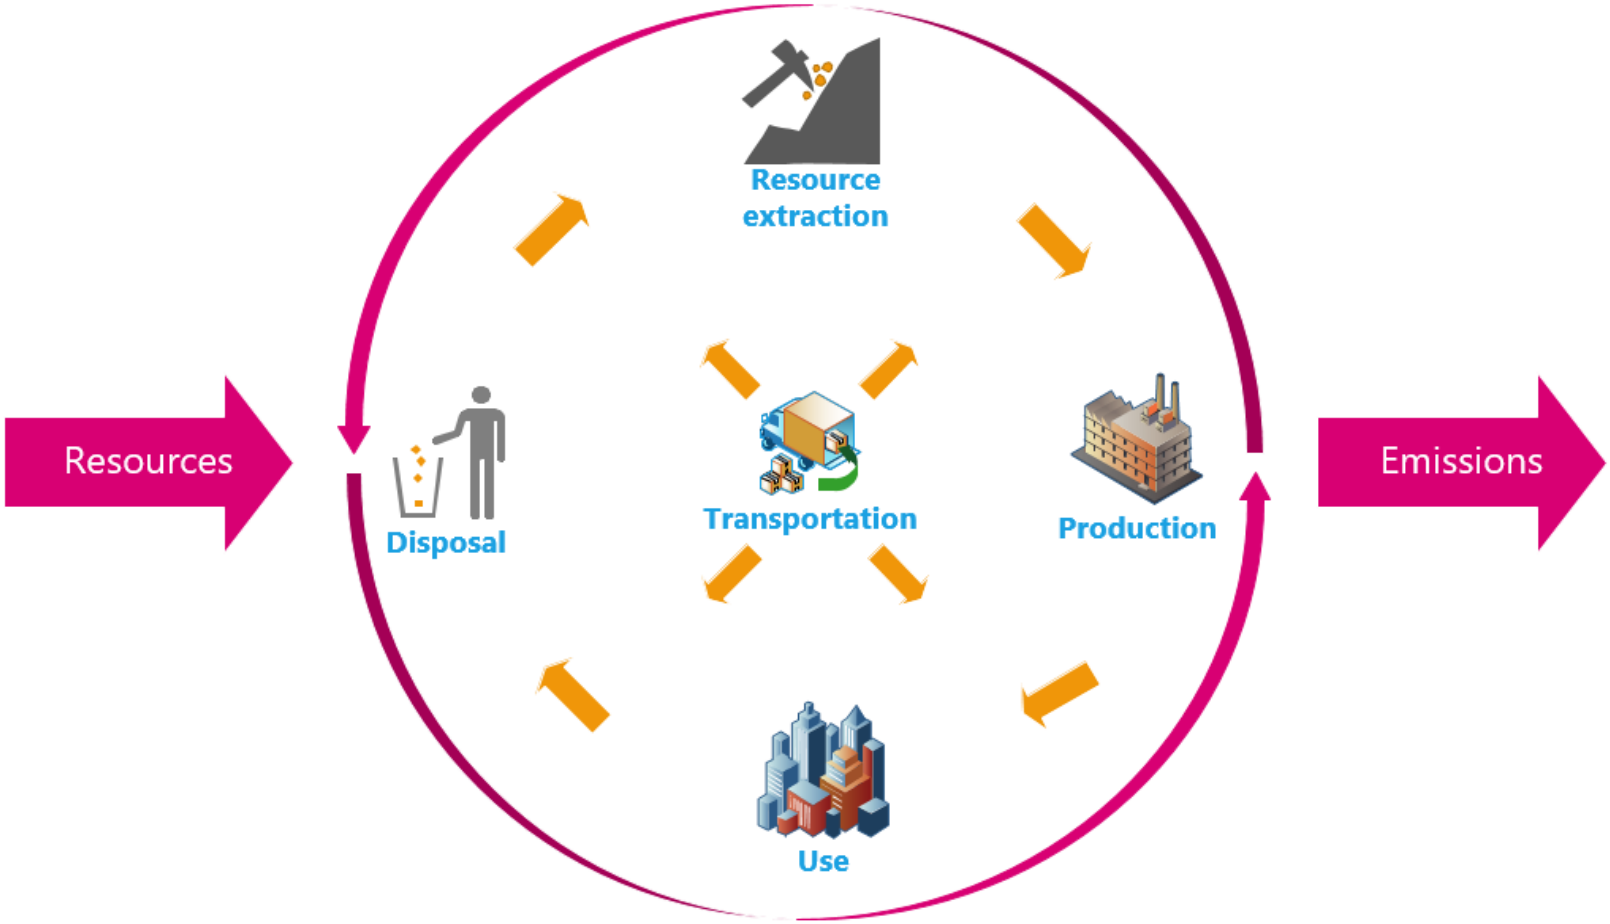
Source: *World Resources 2000-2001, People and Ecosystems: The Fraying Web of Life*, World Resources Institute (WRI), Washington DC, 2000.

Introduction (2): Competition for water

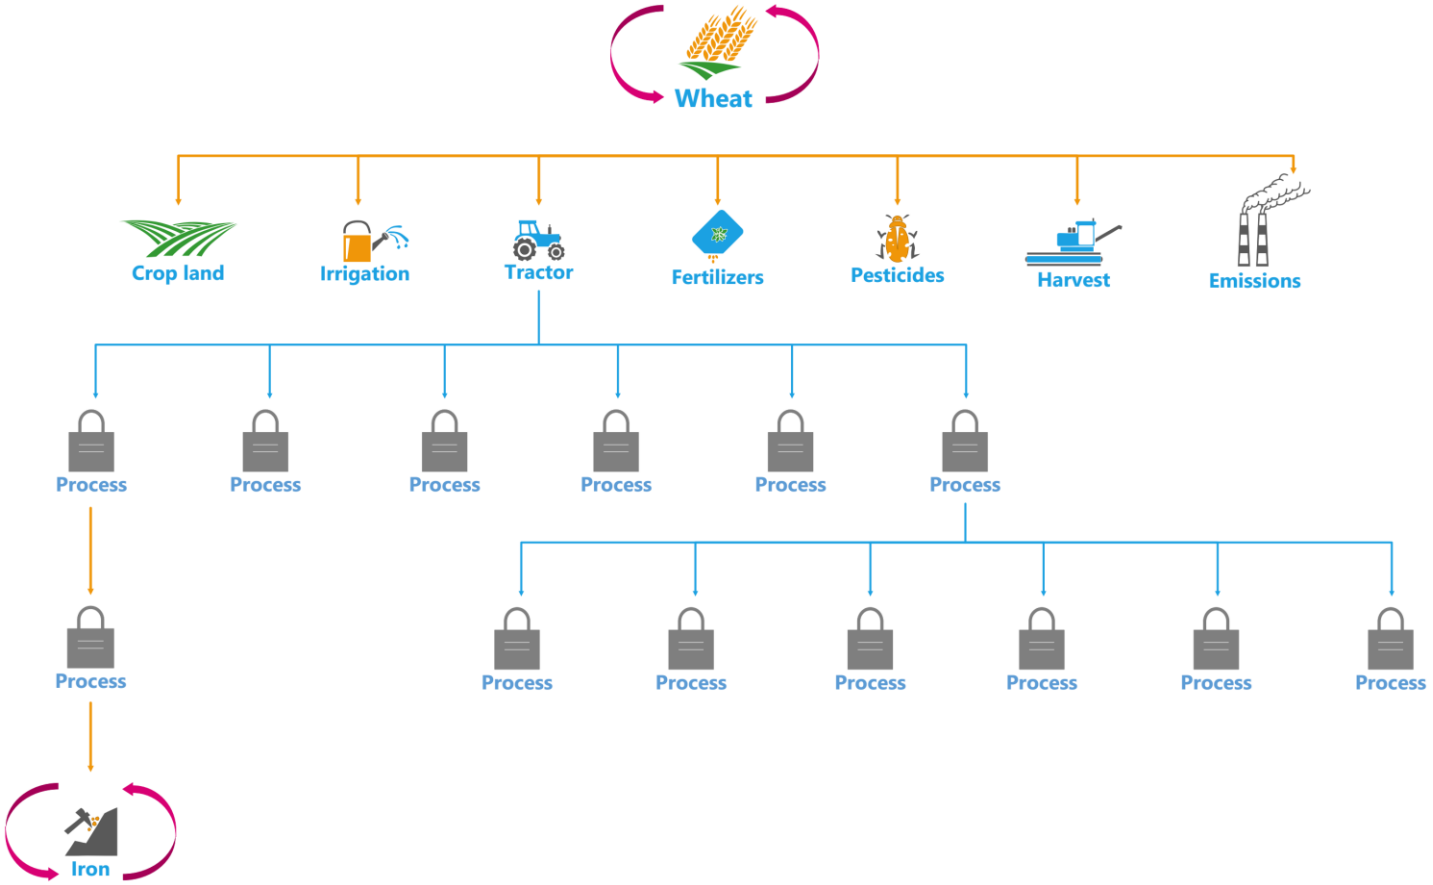


- Main consumer
- Competition among agriculture and the other economic sectors

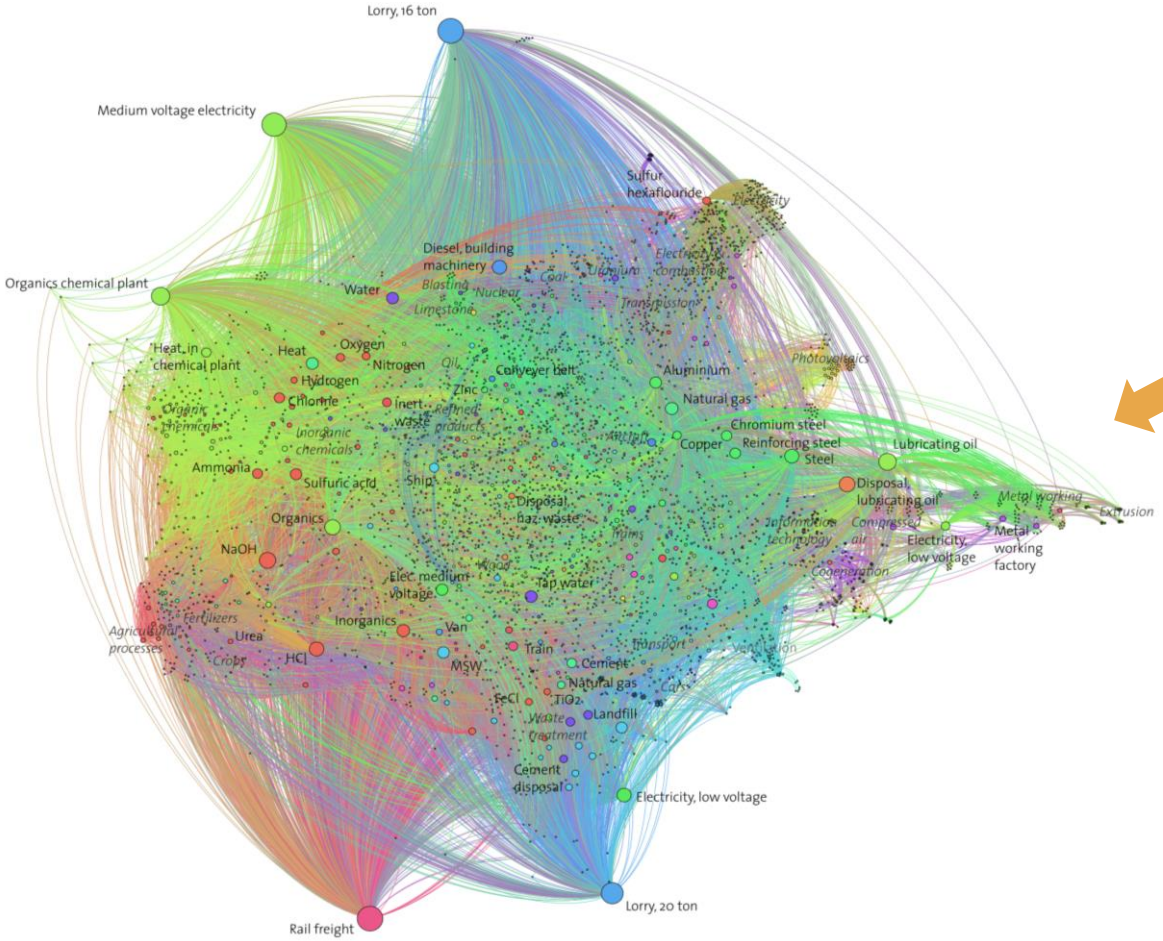
Life Cycle Assessment (1): Overview

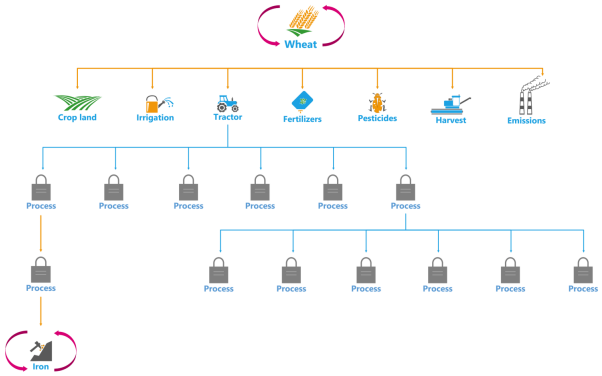


Life Cycle Assessment (2): Wheat production



Life Cycle Assessment (2): LCA Database

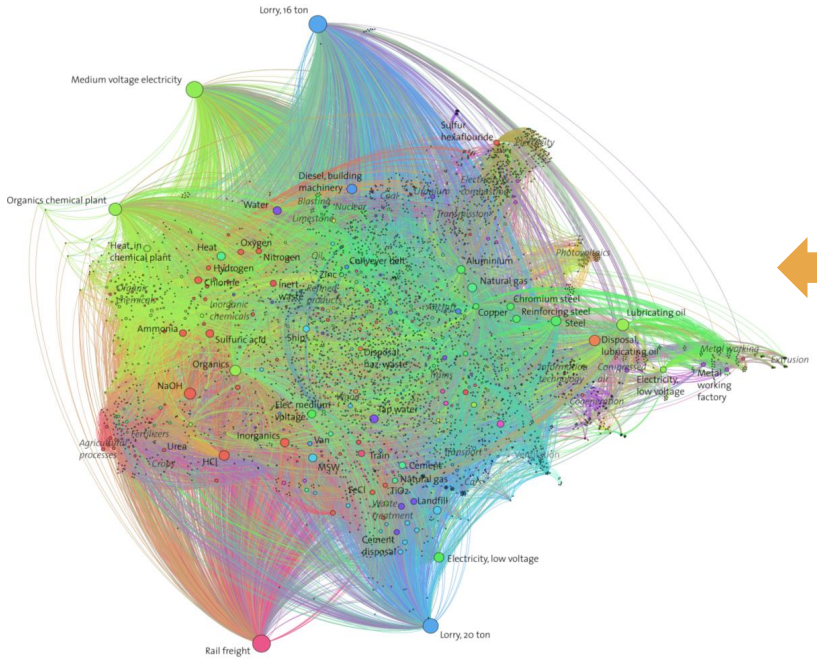


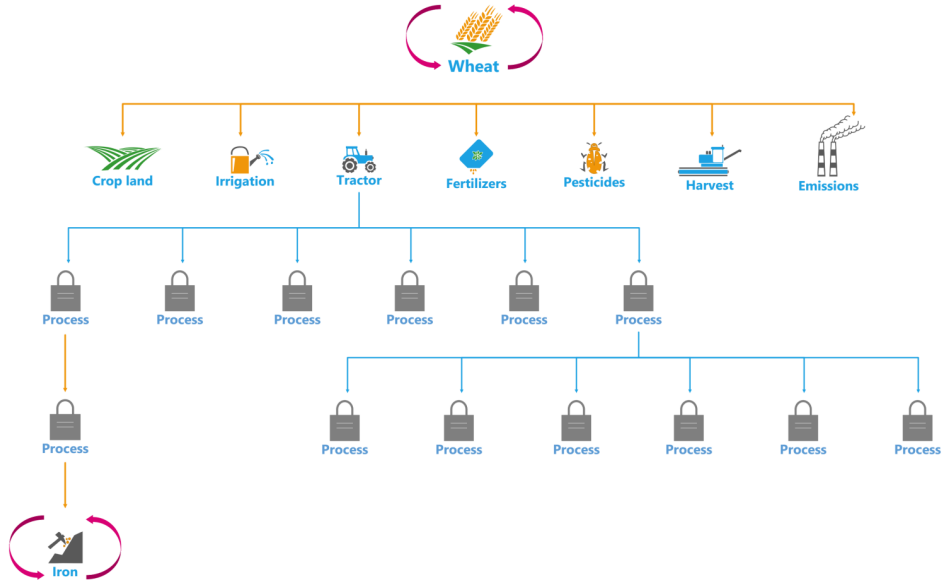


“Spiral Spider Web”
LCA database

Example cloud is Ecoinvent LCA database by Dr. Chris Mutel

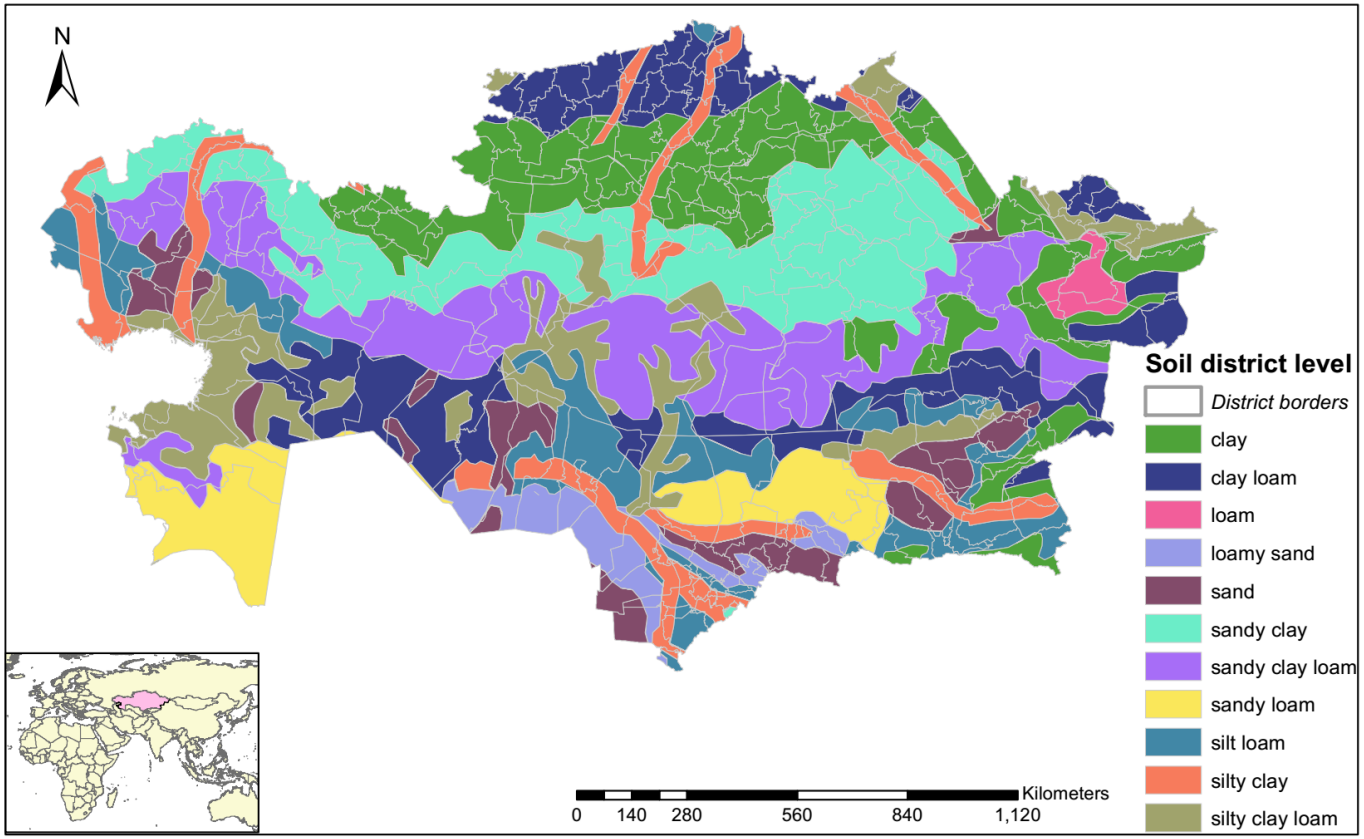
Life Cycle Assessment (2): Why database?



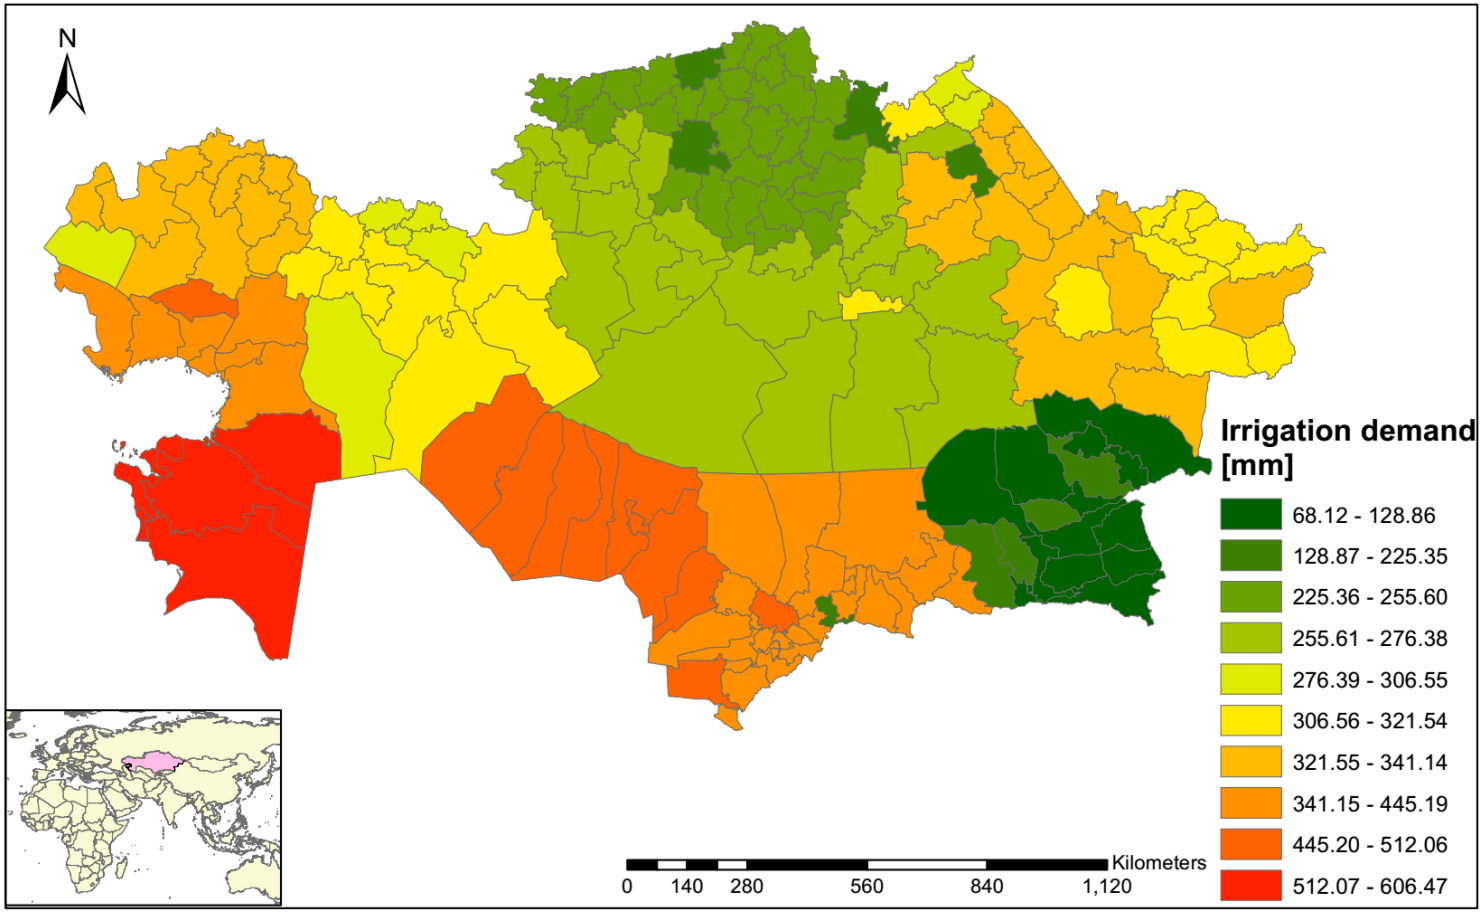


- Comprehensive analysis of impacts throughout the whole system!
- No “Problem shifting”!
- Nothing is skipped!

Master thesis (1): Soil map



Master thesis (2): Irrigation demand



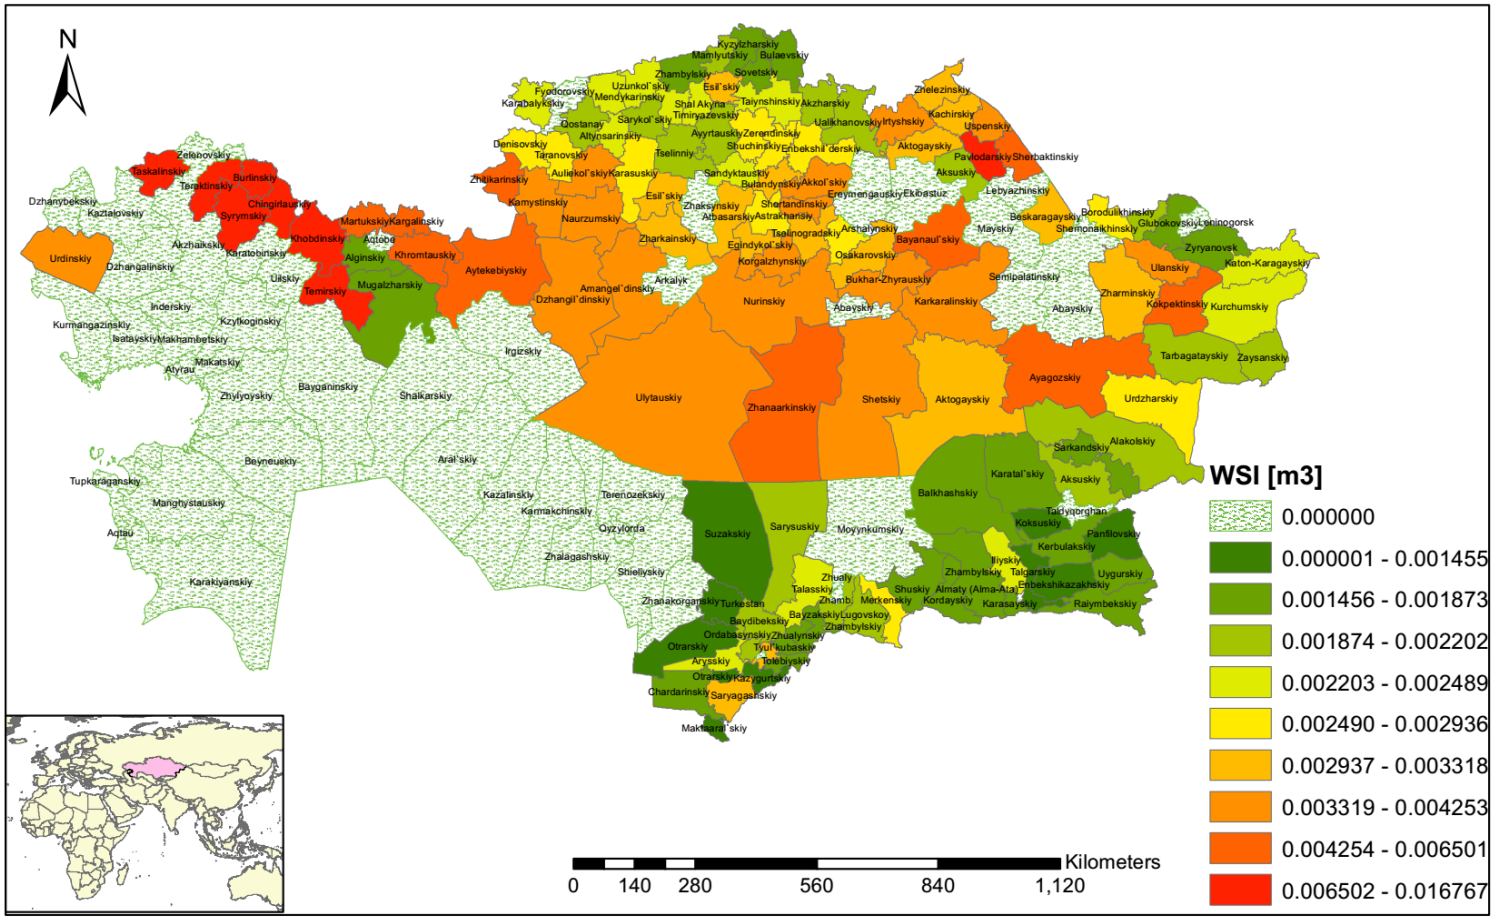
Master thesis (3): Inventories

Input-output data for:

- 17 crop types
- With and without agronomist classification

Winter wheat (with agronomist)					
Number	Processes	Machinery or insruments used	Active ingredient	Unit	Amount
1	Ploughing	TMZ-80 tractor, MB-6, ЗБТС -1		liter	34.9
2	Harrowing	TMZ-80 tractor, СЭЗ-2,1		liter	12.5
3	Rolling	TMZ-80 tractor, СЭЗ-2,1		liter	5.5
4	Weeder	TMZ-80 tractor, СЭЗ-2,1		liter	15
5	Sowing	TMZ-80 tractor, СЭЗ-2,1		liter	32
6	Irrigation	Sprinkler machine			8.9
7	Ferlizer transportation	TMZ-80 tractor,		liter	5.1
8	Ferlizer	Ammonum nitrate	(NH4NO3) 34,5%	kg	100
9	Ferlizer	Ammonia (in August)	N60	kg	40
10	Electricity during the irriation	Electricity		kWh/h	14.6
11	Herbicide	Herbicide ТИФИ	тифенсульфурон-метил (750 г/га)	kg	0.7
12	Against diseases	Байтан универсал	15 % триадименол	kg	2
13	Against diseases	Тилт	пропиконазол, 250 г/л	kg	0.5
14	Pesticide	Техникалық хлорофос	1-окси-2,2.2-трихлорэтил)	kg	0.7
15	Irrigation	1000-1200 m3/hec, one time, after 3-4 months after sowing		m3	1000

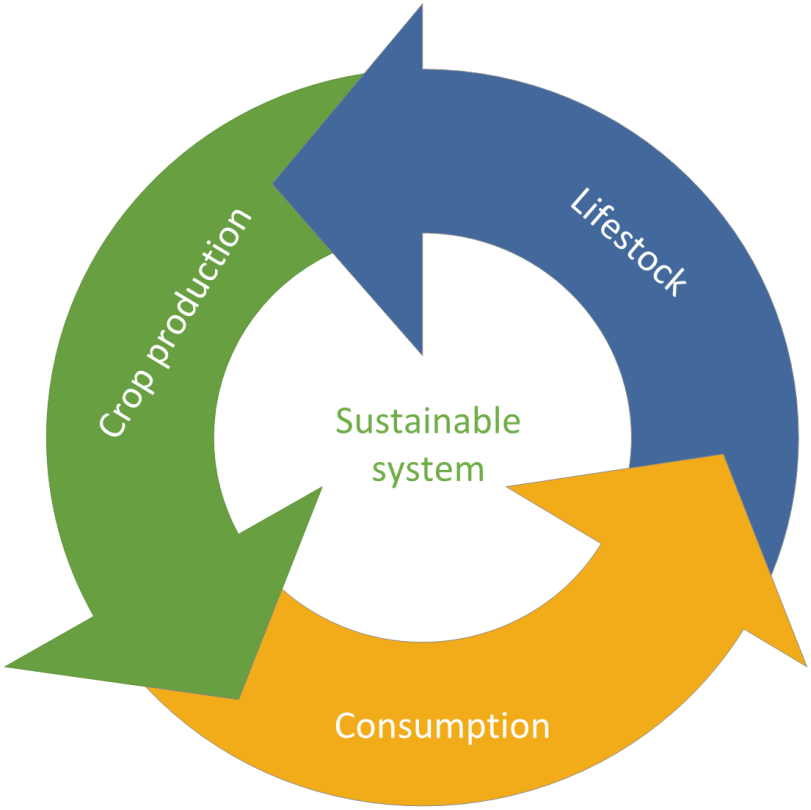
Master thesis (4): Impact maps



Sustainability assessment toolbox

SSE: purpose

- Environmental Impact Assessment:
  - Inventory modelling environment for life cycle assessment purposes
- Modeling:
  - Parsimonious modelling in water resources, agriculture etc.
- Mathematical optimization:
  - Technical
  - Economical
  - Social
  - Sustainability
- PISA framework



SSE: general structure diagram

SSE: how it works

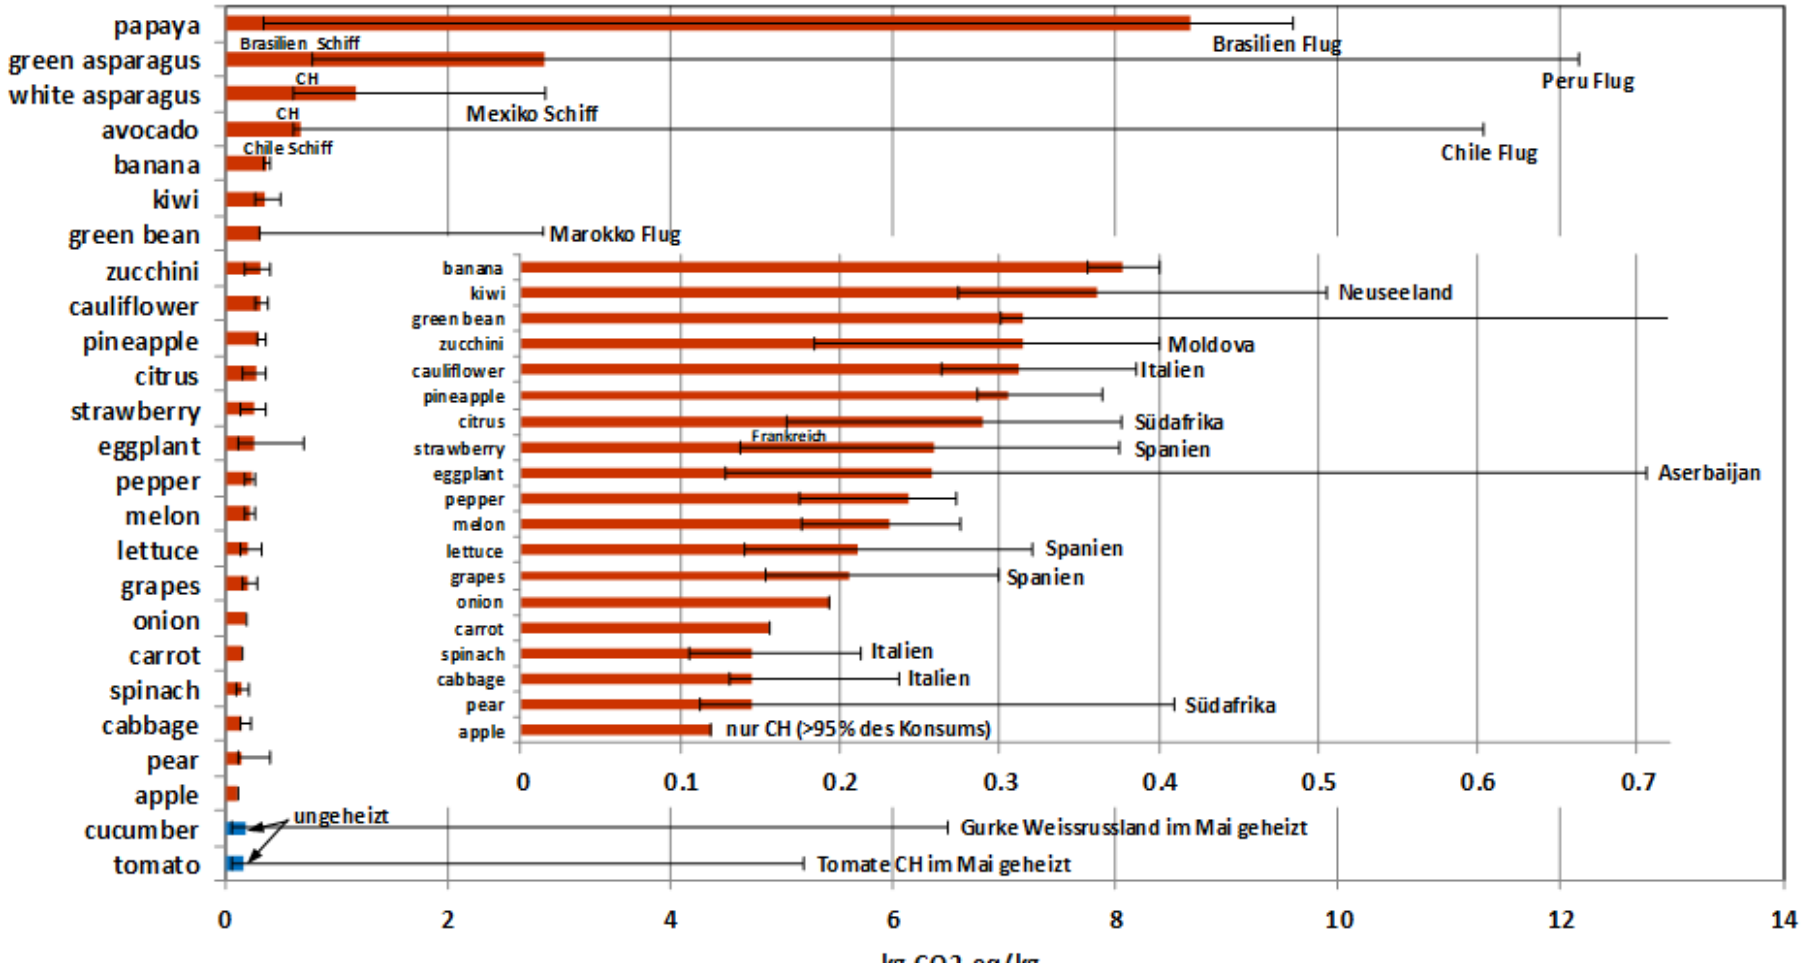
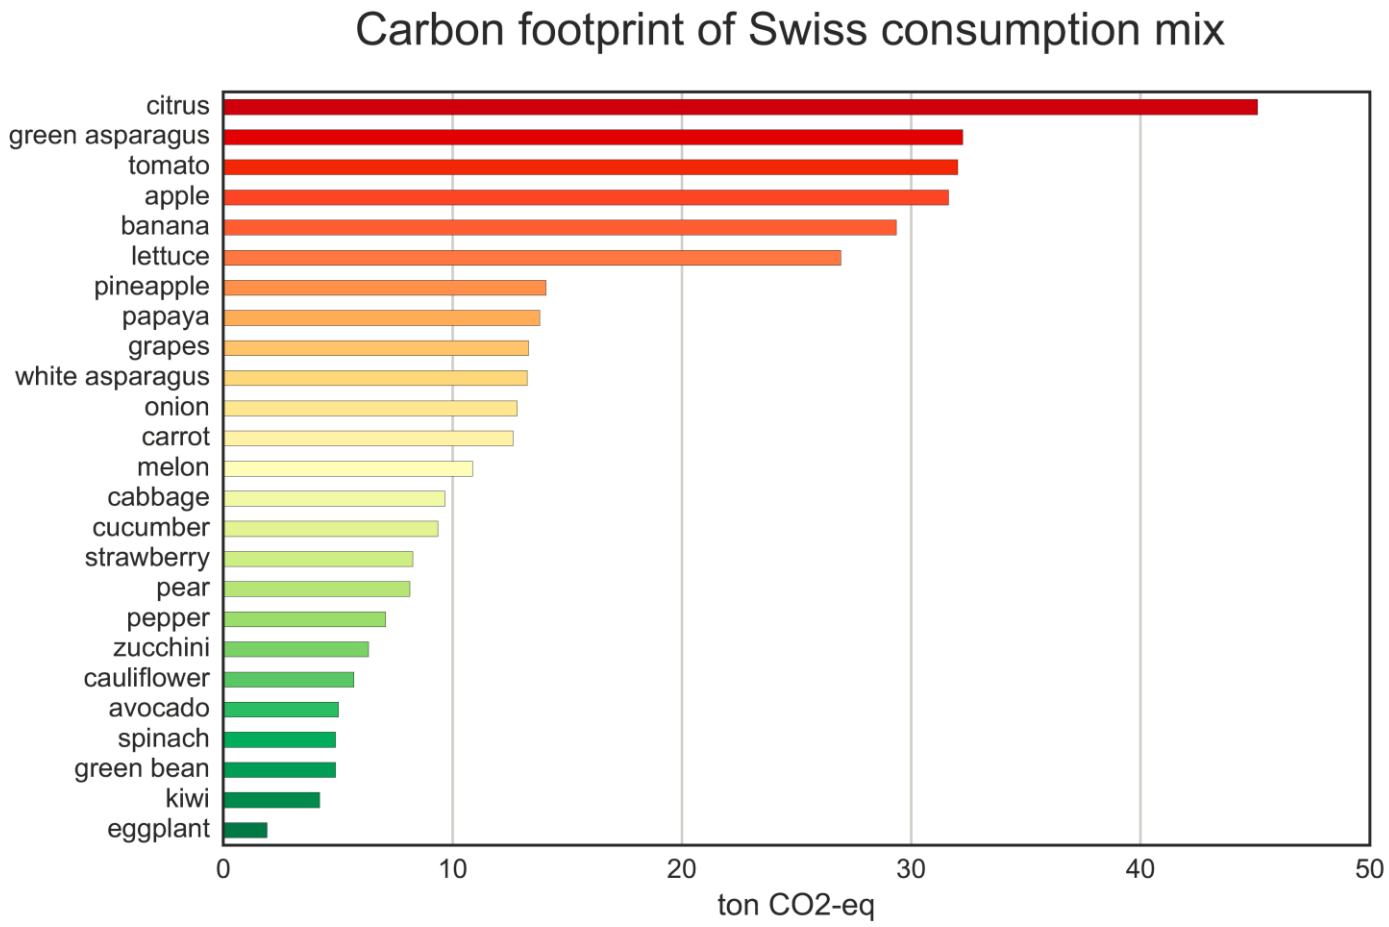
fertilizers
emissions to air
water use
other impacts
greenhouse heating

Case study: Switzerland (1)



Case study: Swiss import results for total consumption (2)



Mathematical optimization (1): Why?

Conflicting interests:

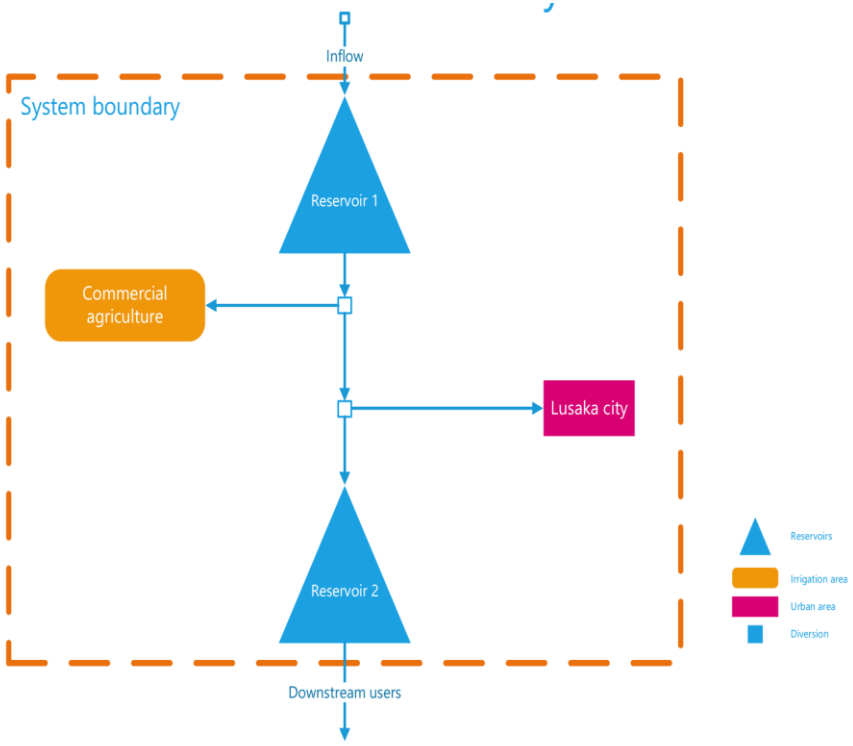
- Upstream vs. Downstream
- Reservoir vs Irrigation
- Reservoir vs City flooding

Constrains:

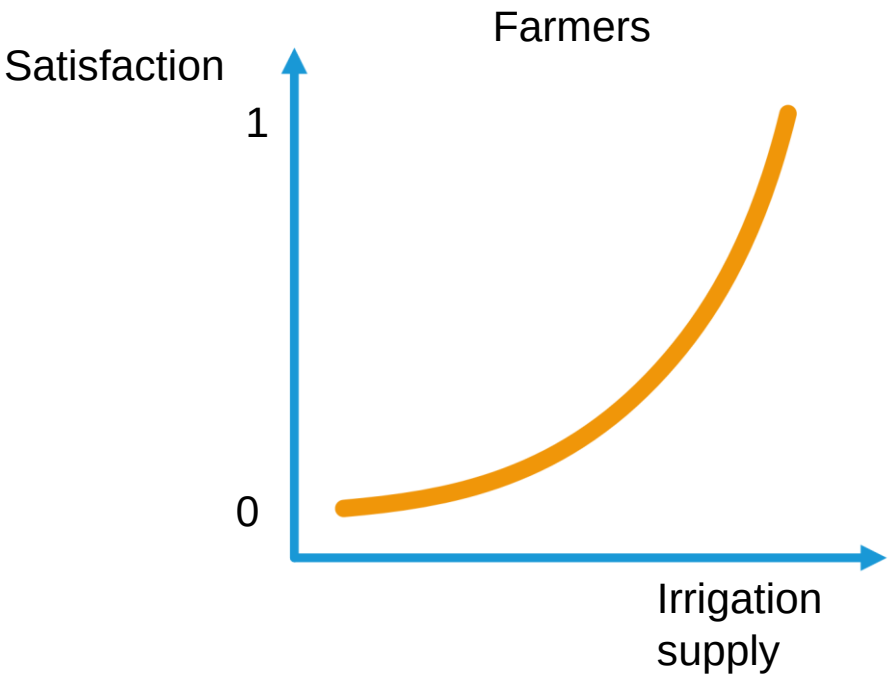
- Cost vs Water saving
- Cost vs Low impact

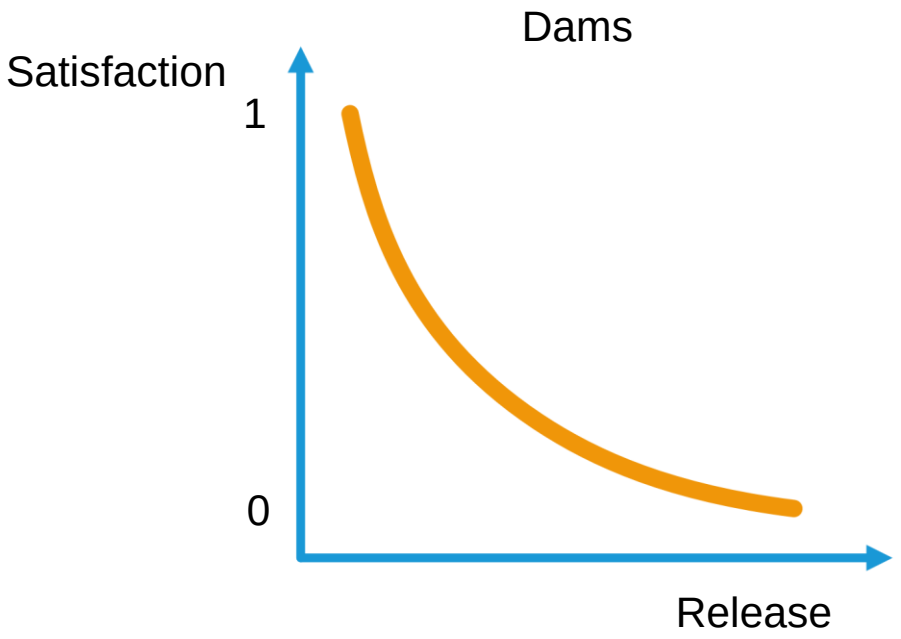
System optimization:

- Optimal design and planning



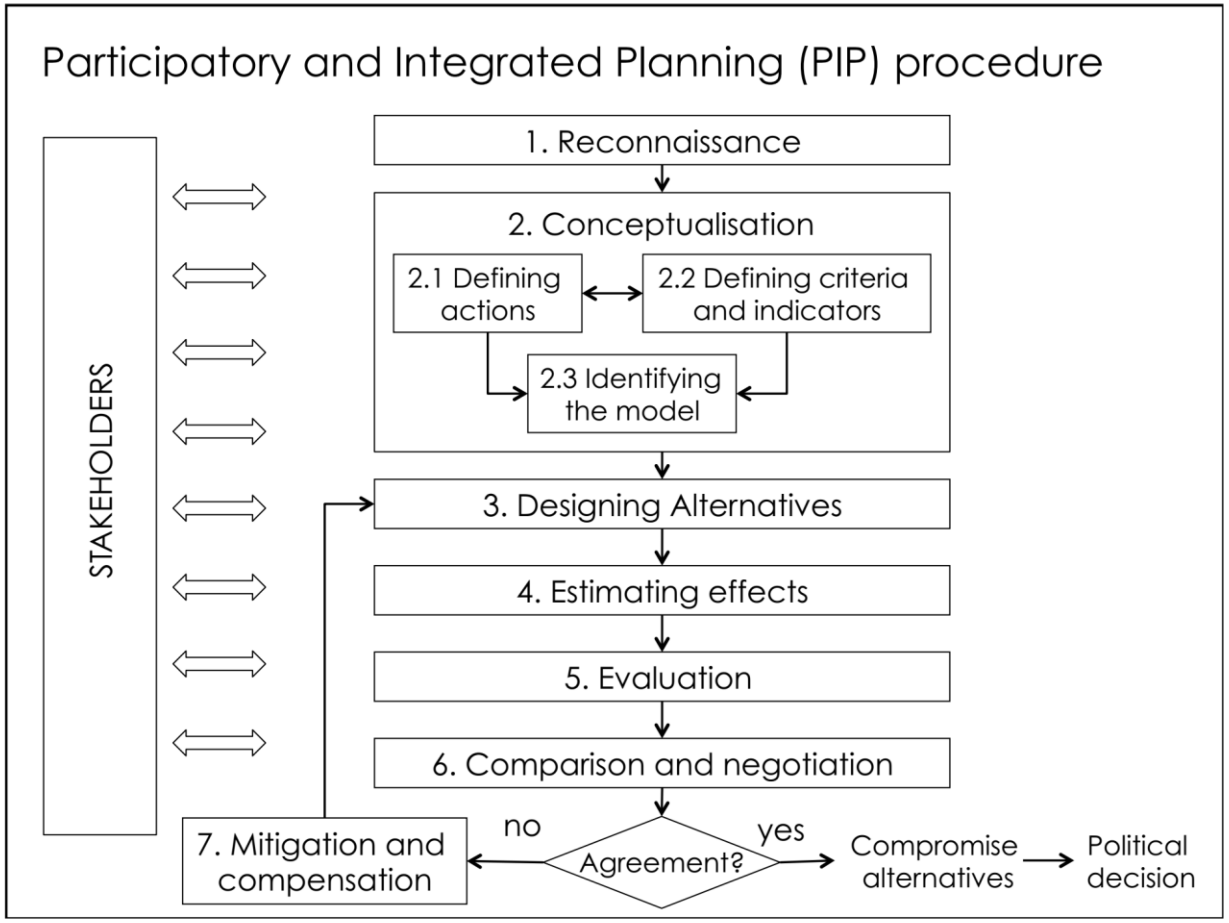
Mathematical optimization (1): Dam vs Irrigation



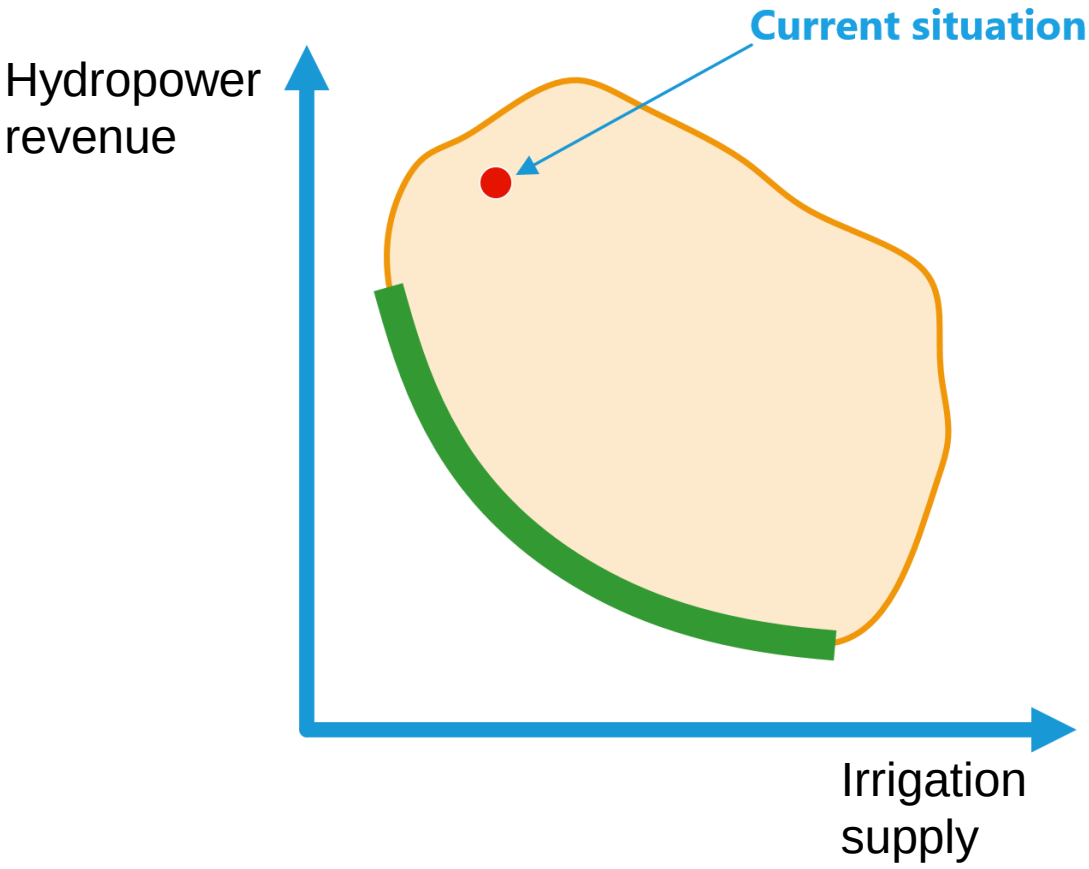


Social aspect!!!

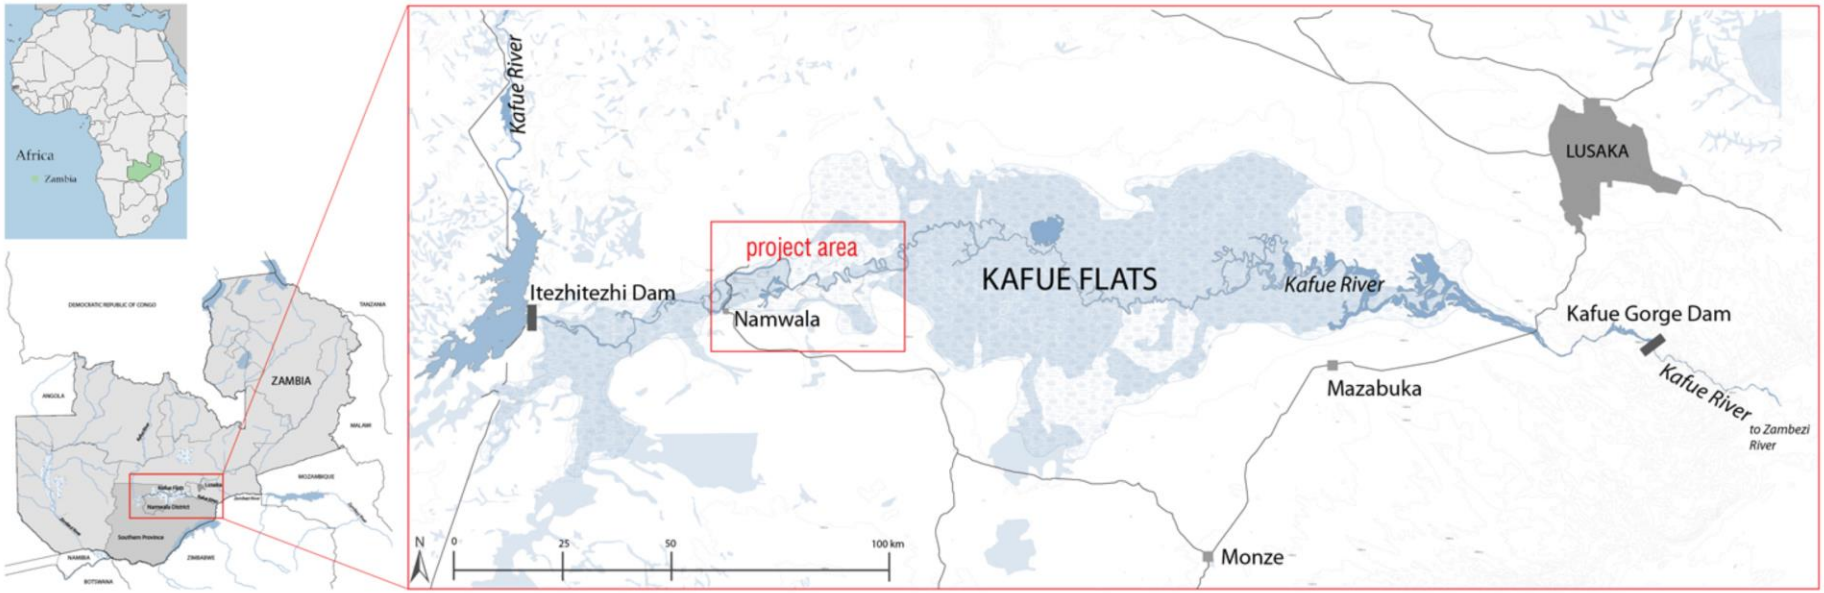
Mathematical optimization (1): Framework



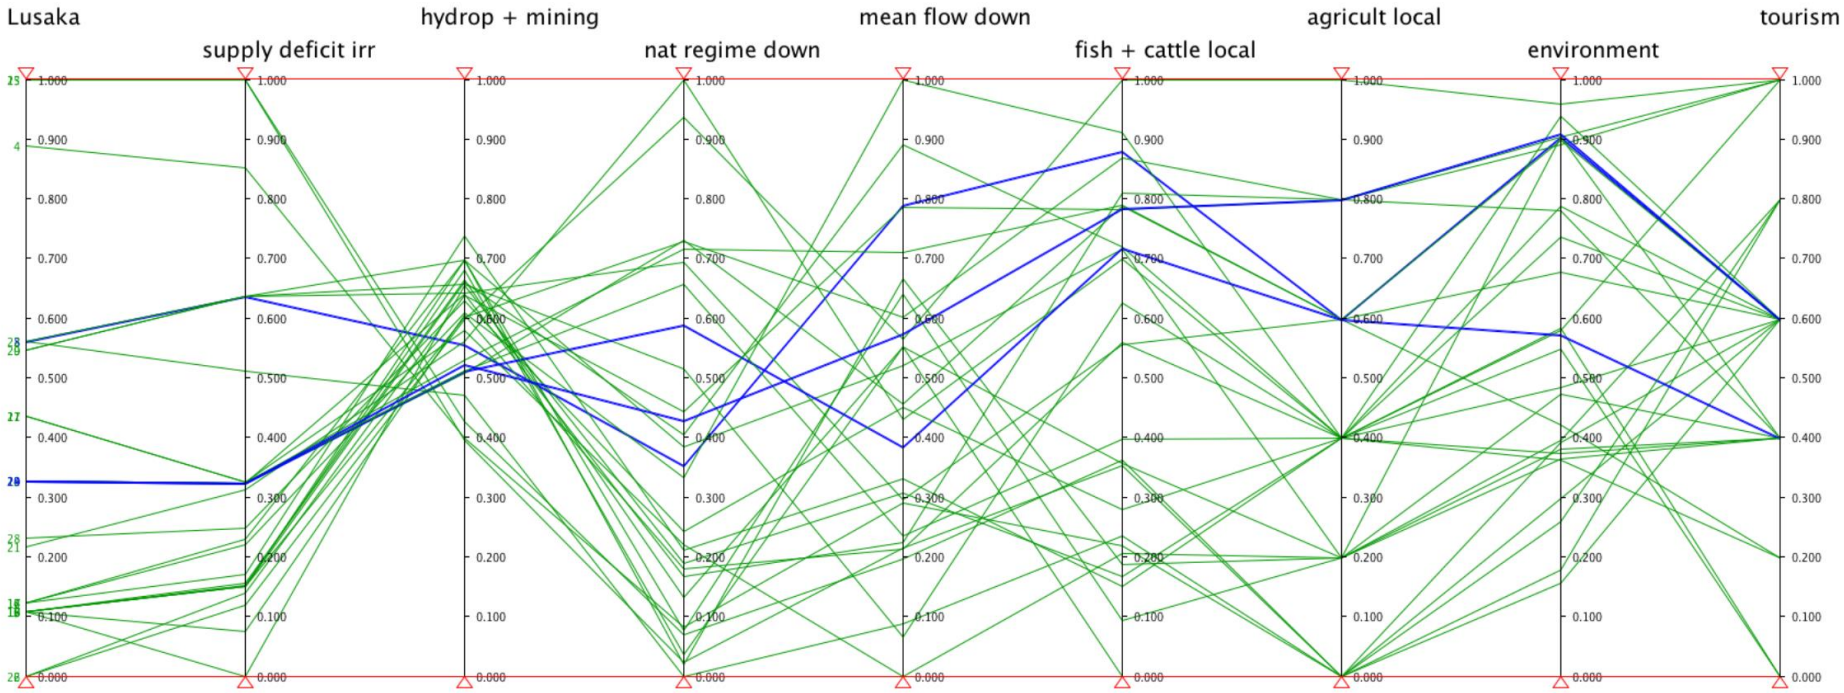
Mathematical optimization (1): Pareto frontier



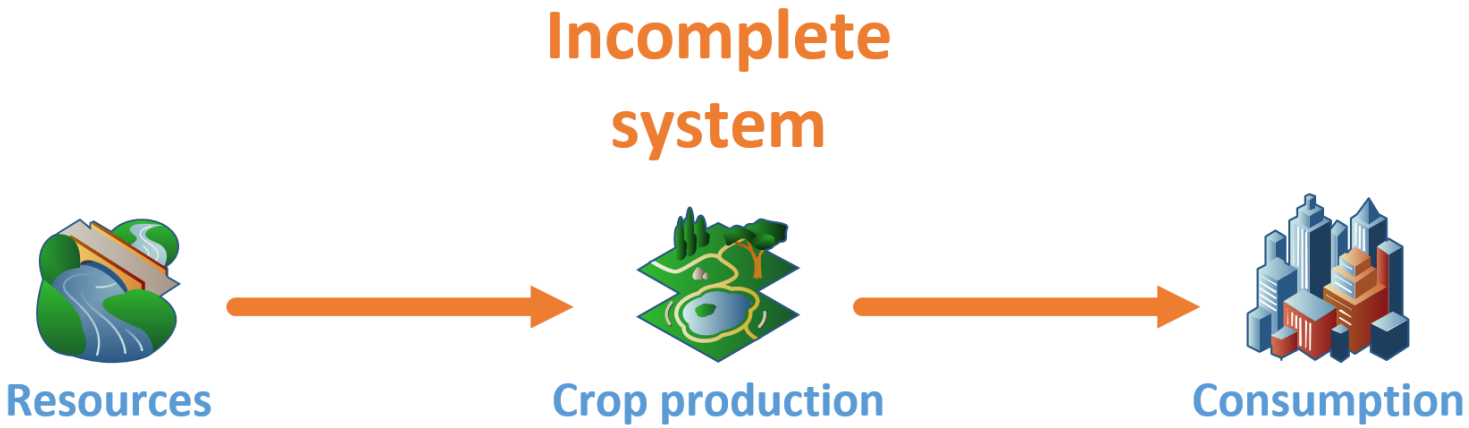
Mathematical optimization (2): Case study



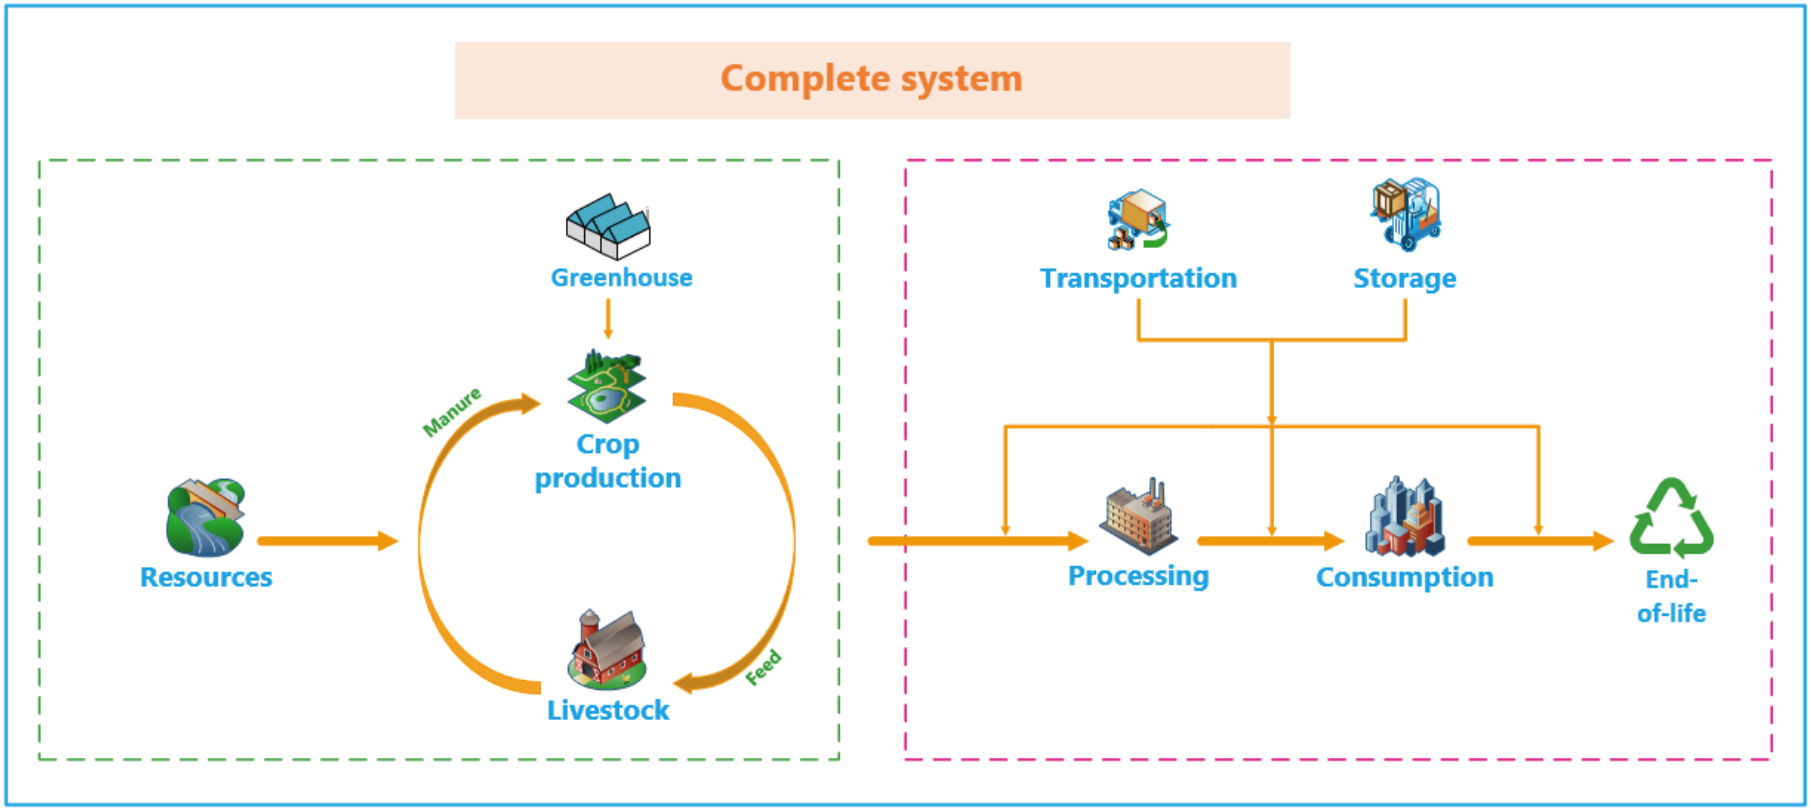
Mathematical optimization (2): Case study



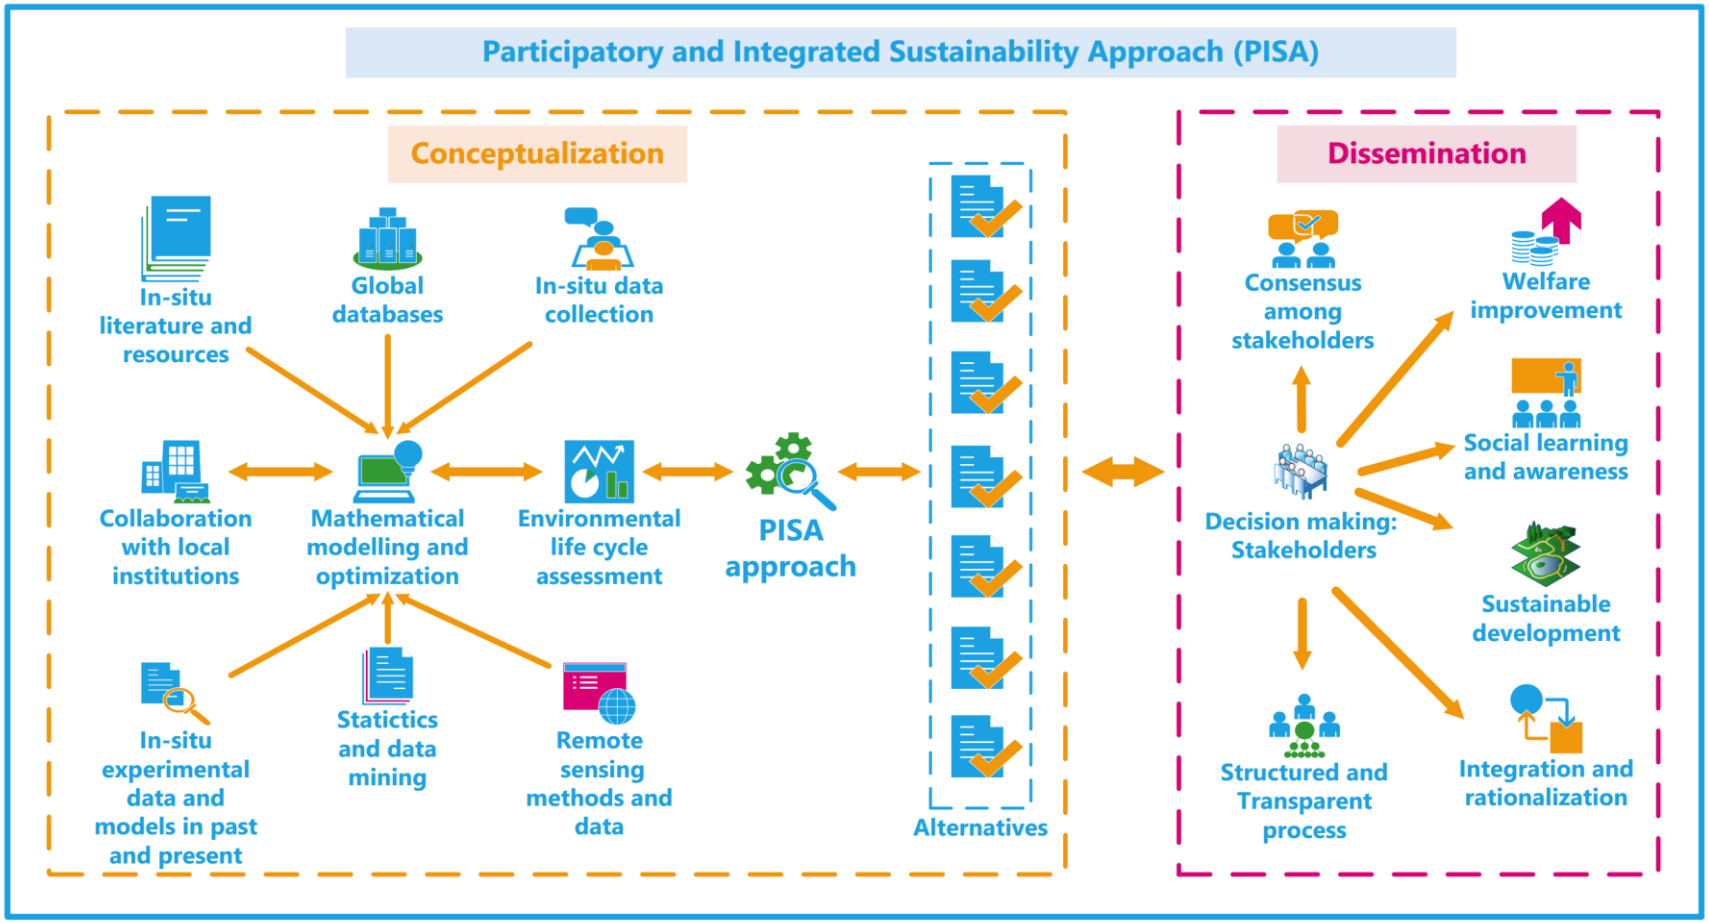
Ongoing research: What is done often



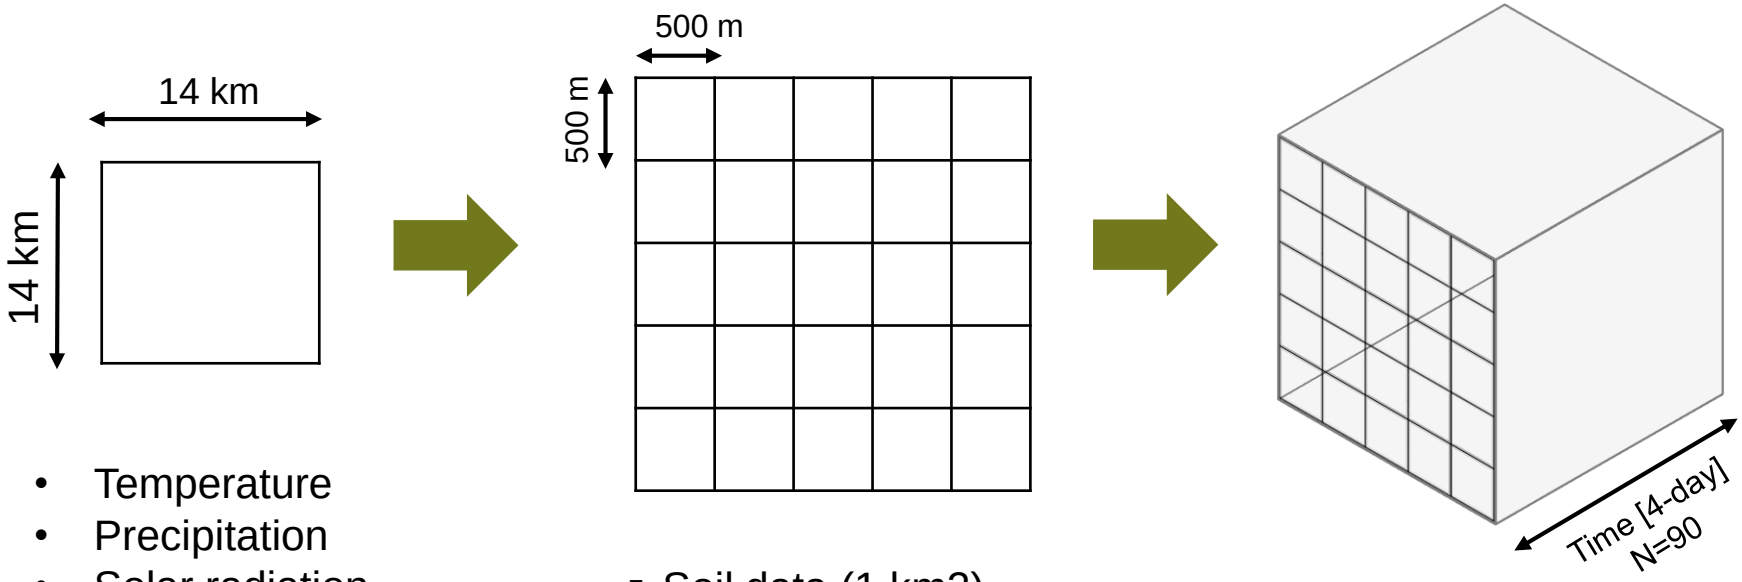
Ongoing research: Zooming out



Ongoing research: PISA framework



Ongoing research: Spatially distributed version



- Temperature
- Precipitation
- Solar radiation
- Wind
- Sunshine hours
- Pressure
- Dew point temperature

- Soil data (1 km2)
- Leaf area index (LAI)
- Photosynthetic active ration (PAR)
- Land cover
- Crop type classification

- ❑ Crop yield
- ❑ Irrigation demand
- ❑ Soil nutrient balance

Ongoing research: Field classification

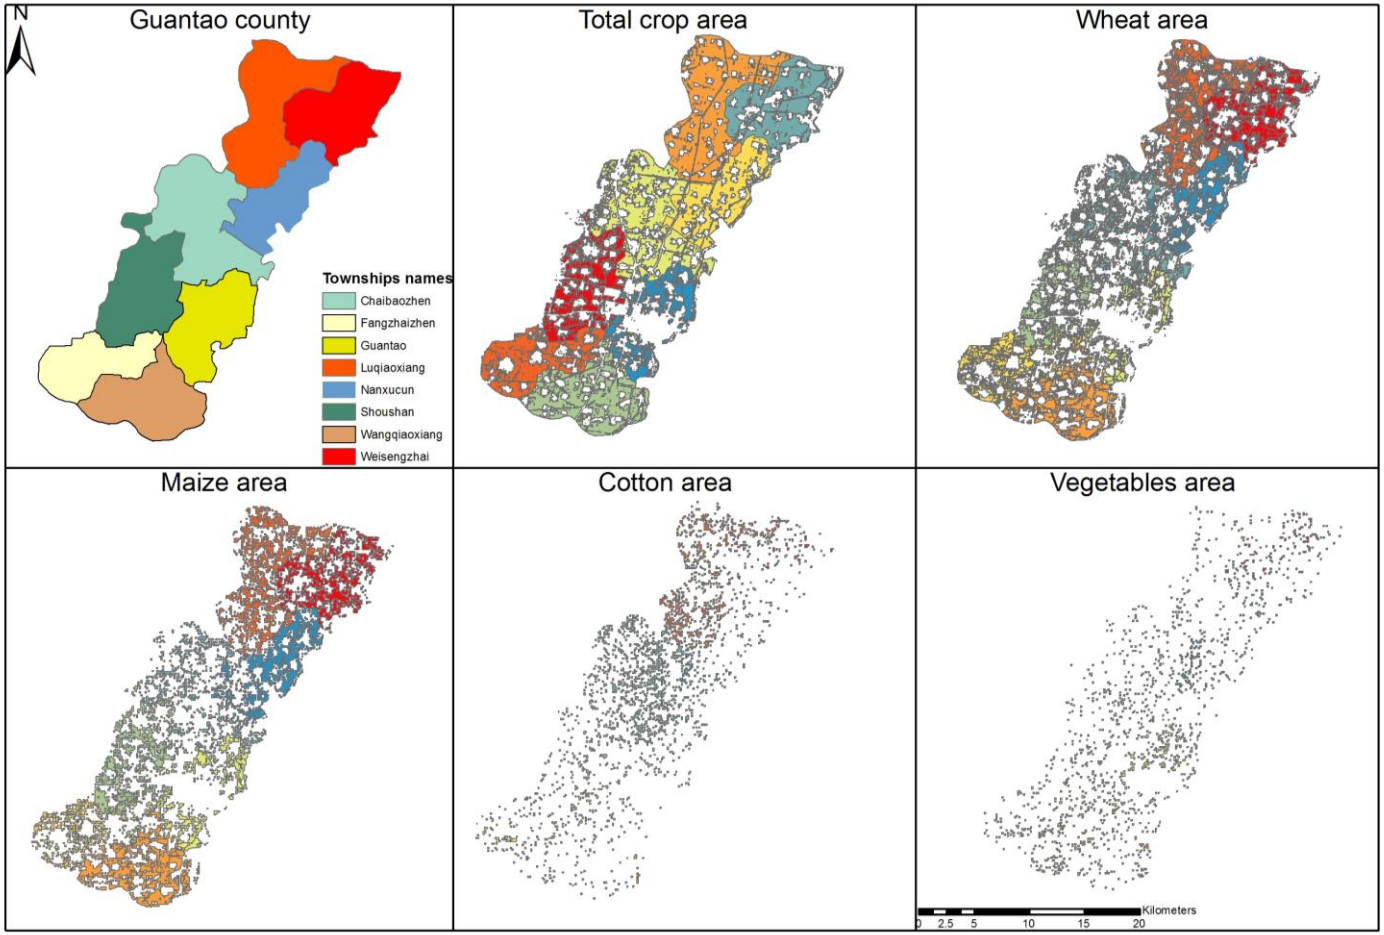
Crop field

Greenhouse

Results can be used for:

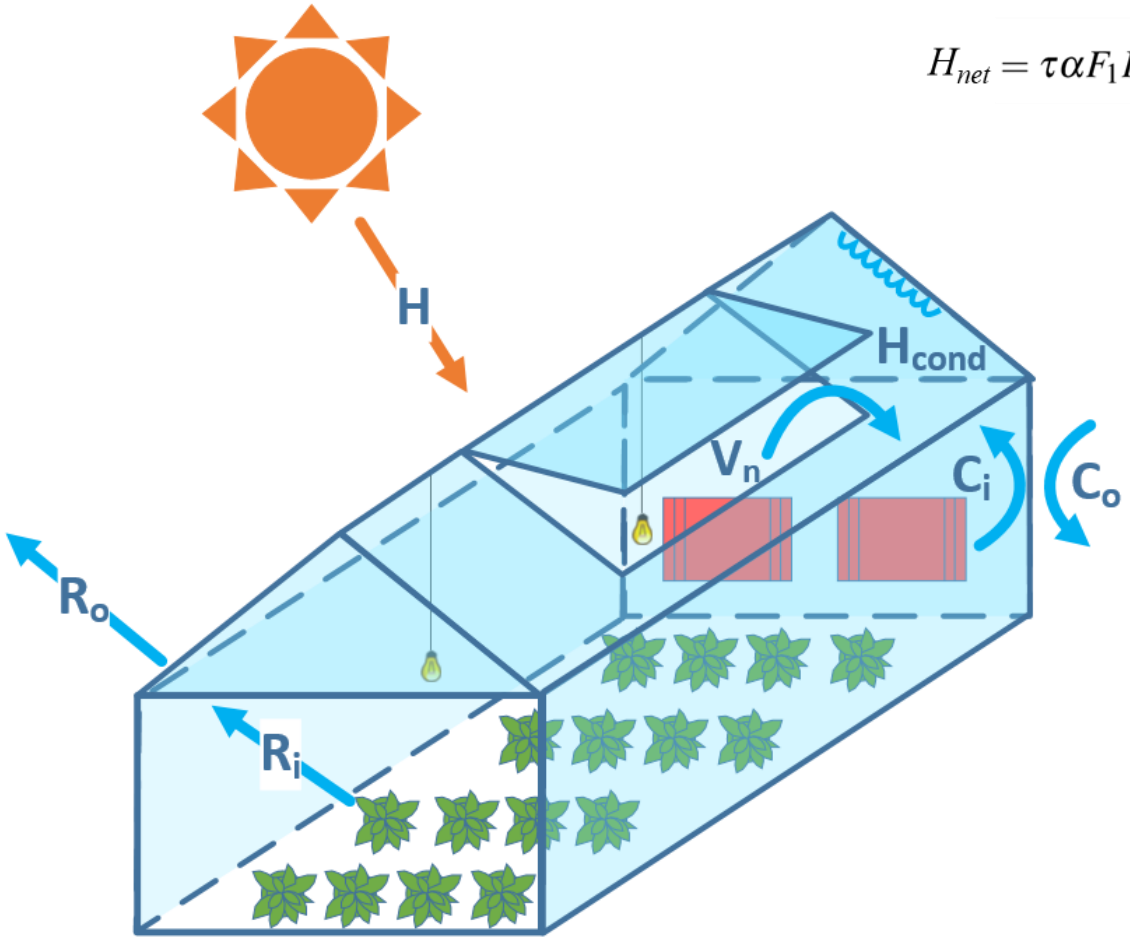
- Hot spots
- Spatial analysis
- More precise crop and greenhouse areas
- More accurate regionalized impact assessment

Ongoing research: Crop type classification

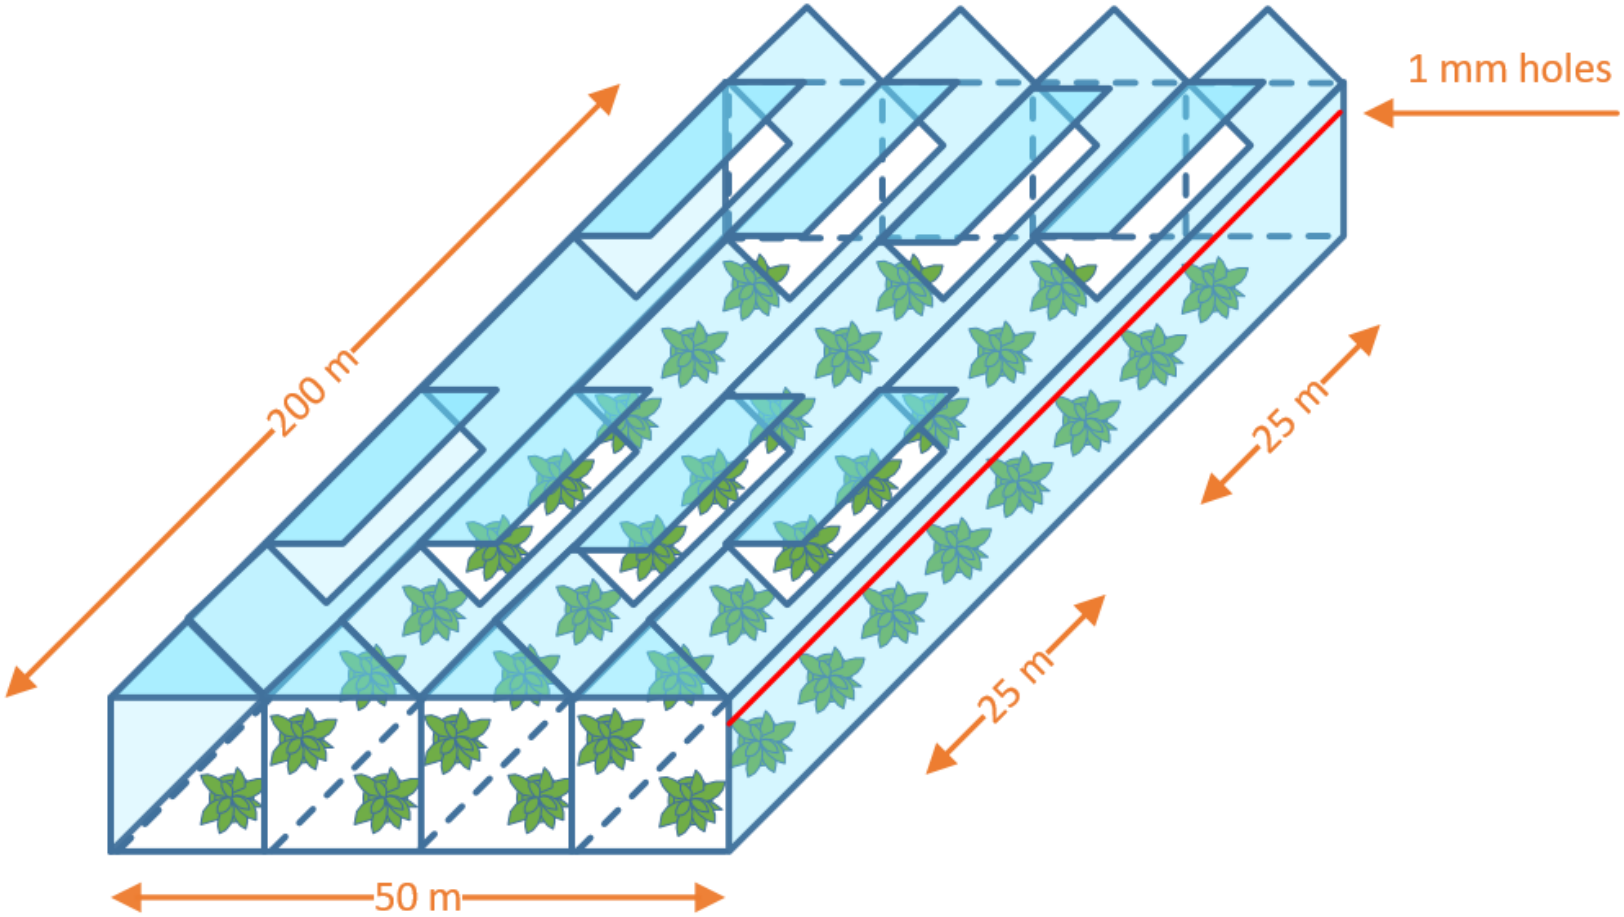


Ongoing research: New greenhouse model

$$H_{net} = \tau\alpha F_1 F_2 A_f H(t) - U(t) A_c (T_{ai}(t) - T_{a_o}(t))$$

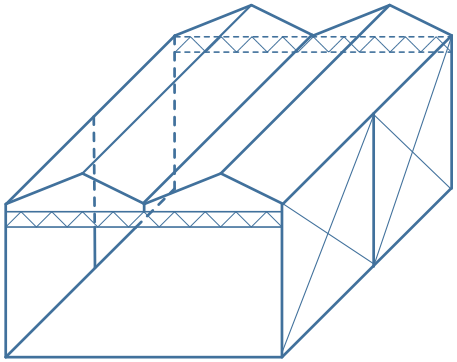


Ongoing research: Modelling assumptions

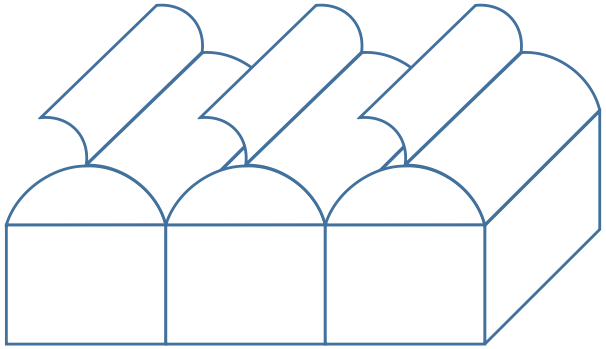


Ongoing research: Greenhouse types

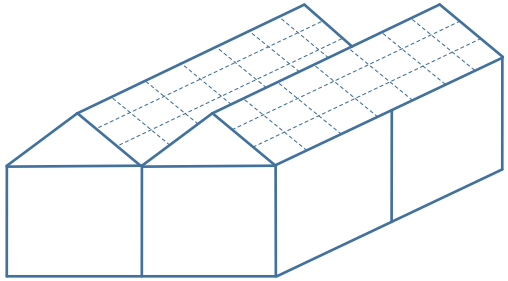
Glasshouse greenhouse



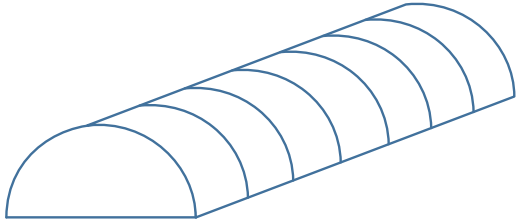
Multi-tunnel greenhouse



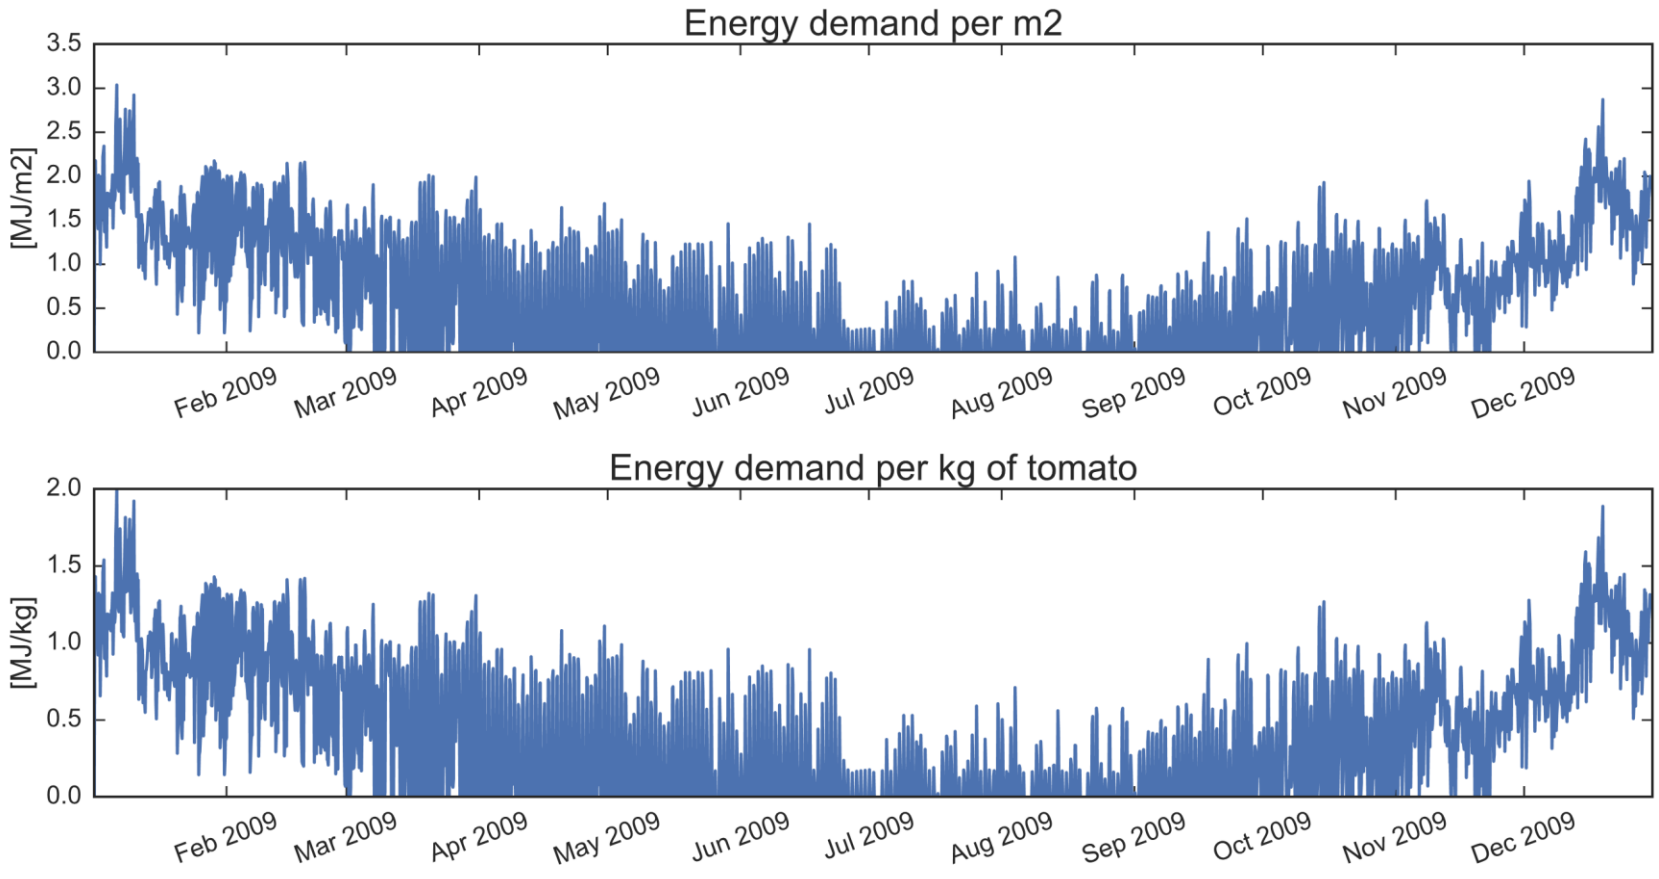
Parral greenhouse



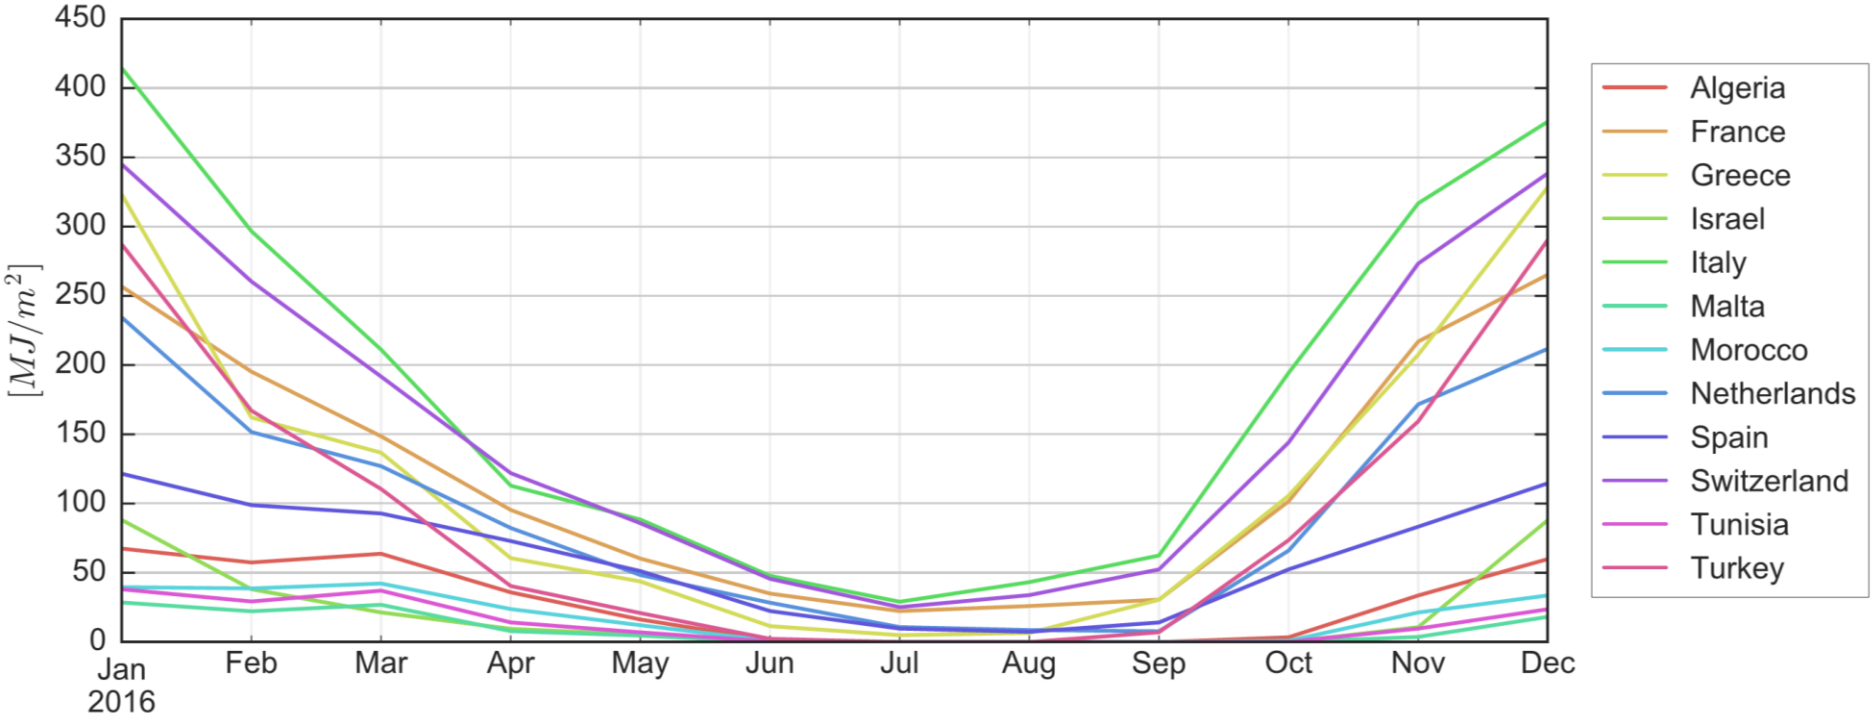
Low-tunnel greenhouse



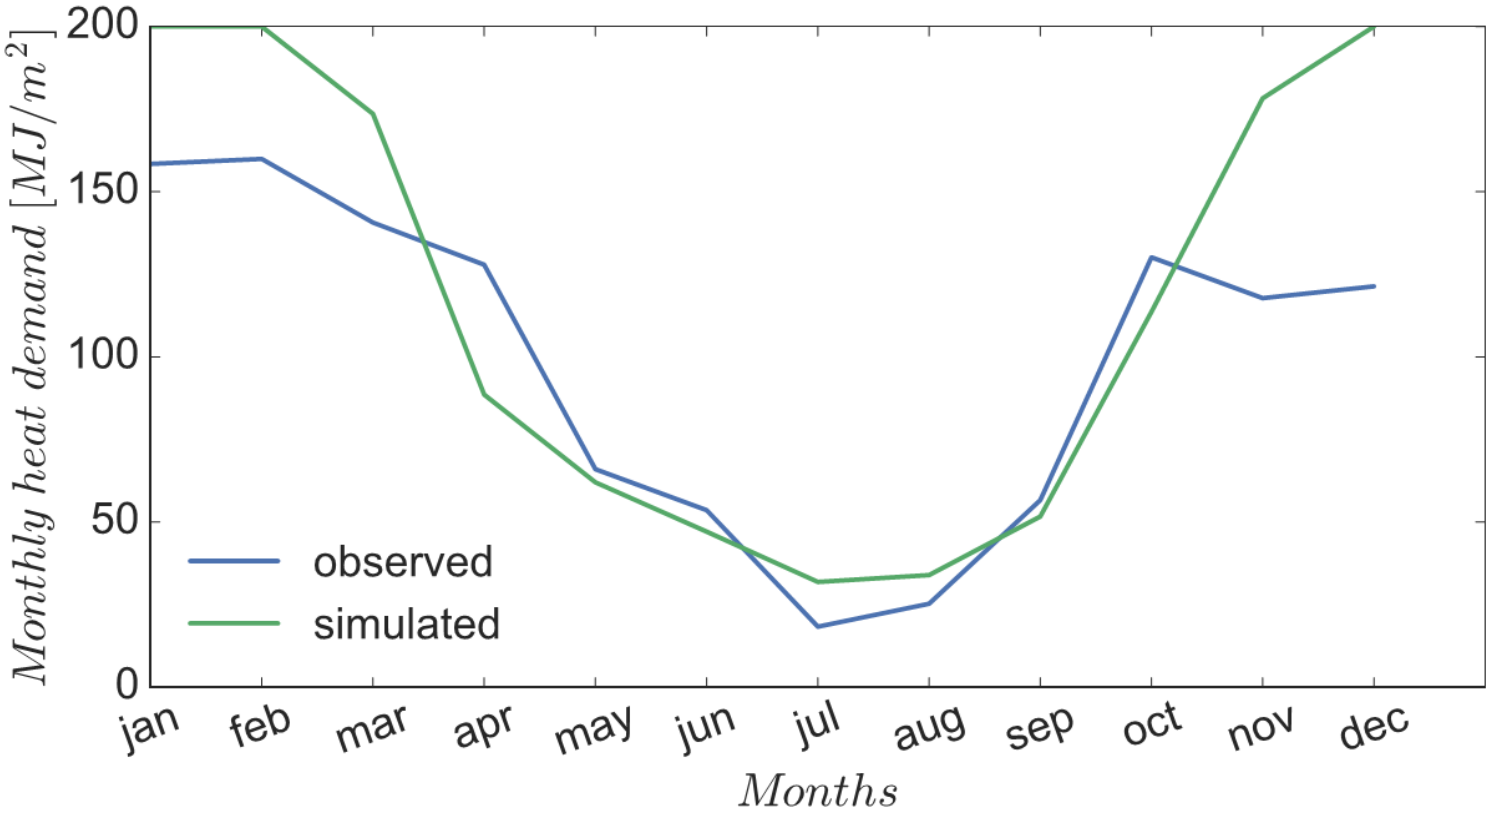
Ongoing research: Greenhouse model results



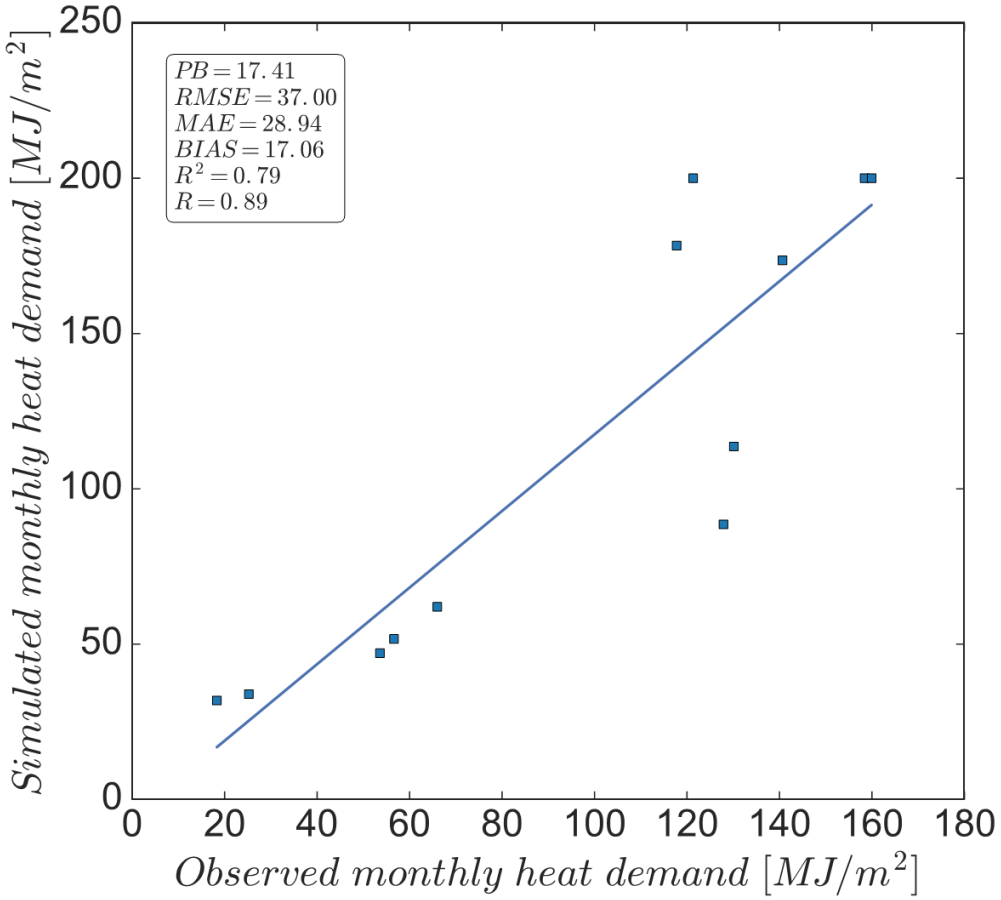
Ongoing research: Greenhouse model results



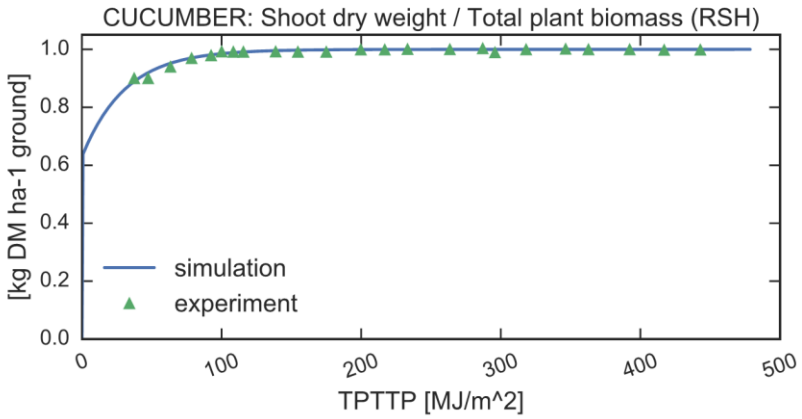
Ongoing research: Validation

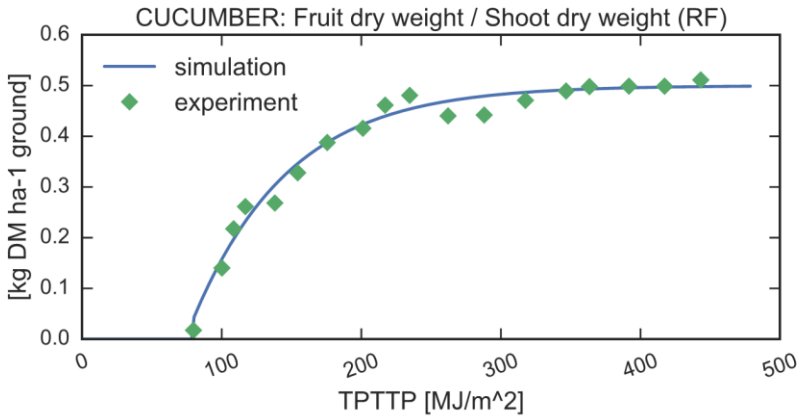


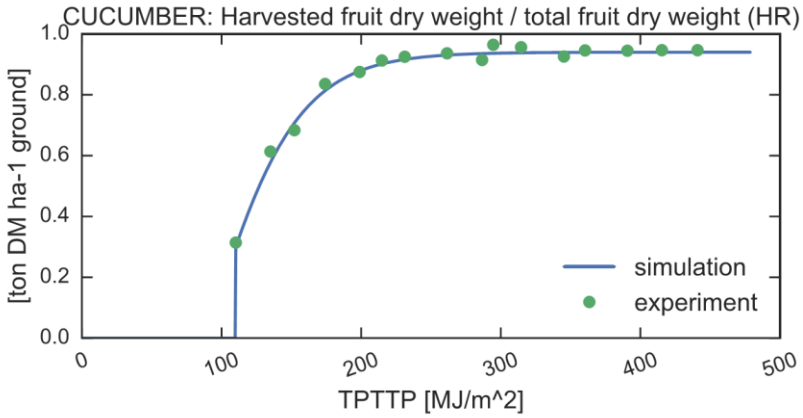
Ongoing research: Validation

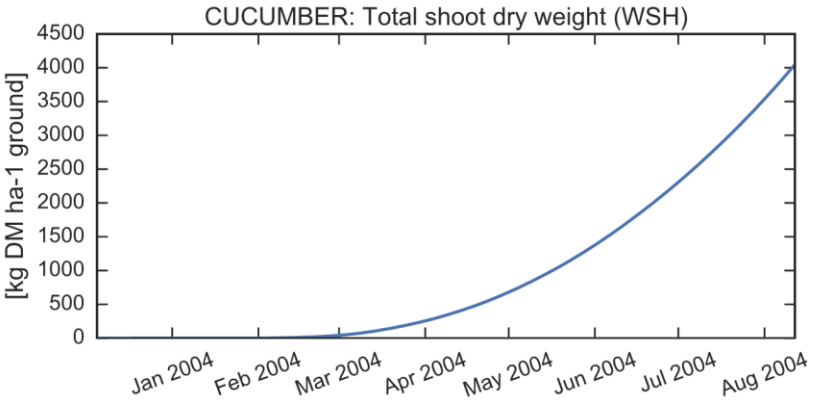


Ongoing research: greenhouse crop model

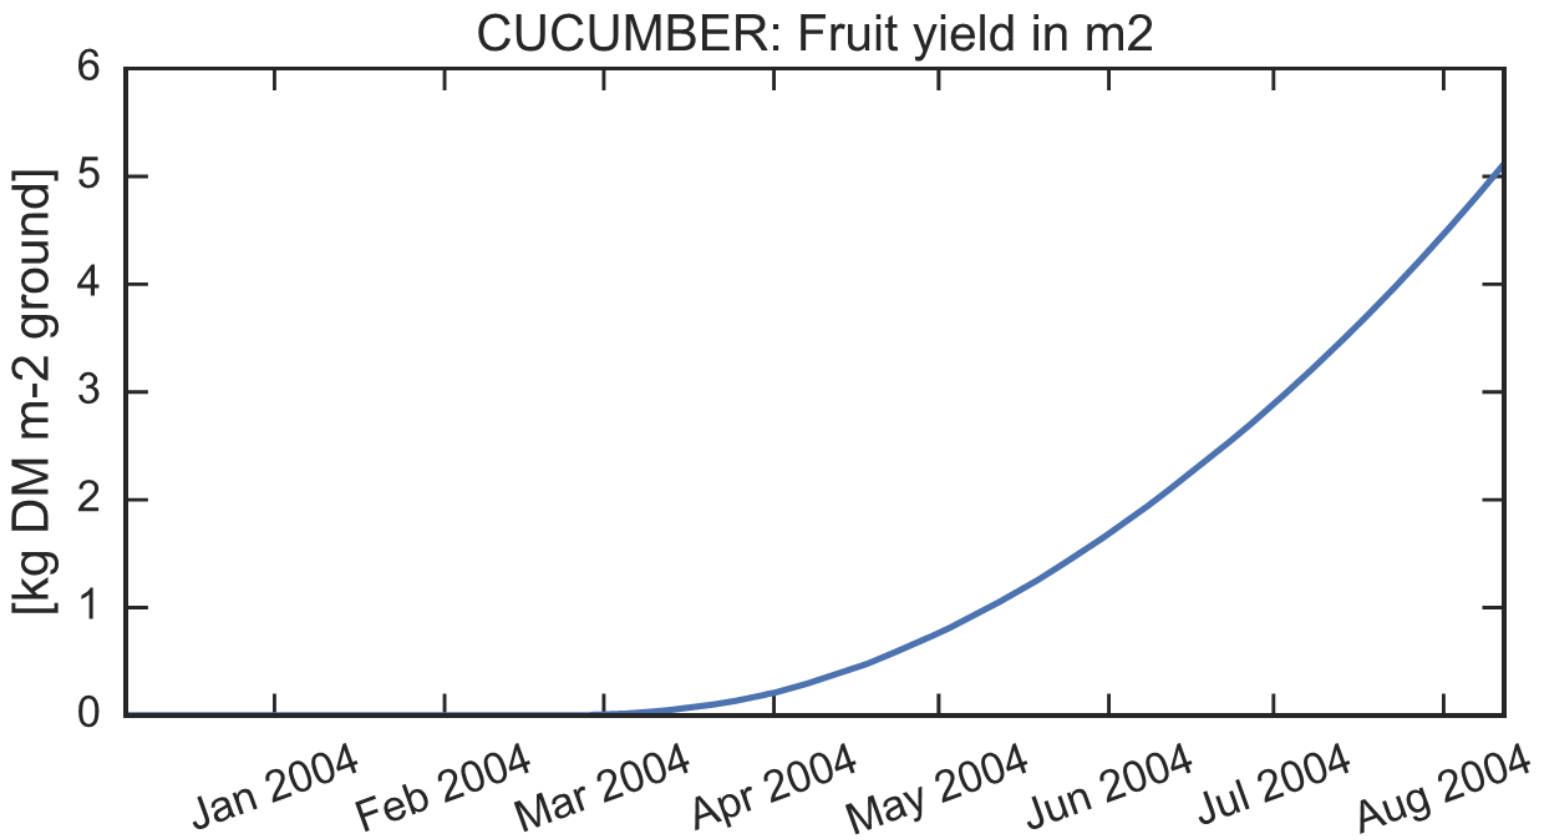








Ongoing research: greenhouse crop model



Thank you for your attention!
