## YURI GAGARIN'S LEGACY

50 YEARS ON - SECURING THE VISION FOR THE NEXT HALF CENTURY

On the 12 April 1961, Vostok 1 lifted off from the Baikonur Cosmodrome (Tyuratam) in Kazakhstan with cosmonaut Major Yuri Alekseyevich Gagarin on board. Gagarin was the first human being to leave the Earth's atmosphere, and although his flight was to last only 1 hour 48 minutes, circling the Earth just once, it provoked important political, social, cultural and technical changes, and changed humanity's perspective of its place on Earth forever

The fiftieth anniversary of this flight provides an opportunity for a conference combining elements of historical review, assessment of the social and cultural impact of the event in the UK, Russia, and worldwide, and consideration of areas of scientific endeavour of common interest to both Russia and the West. The anniversary occurs as the long term objectives and strategy for human spaceflight are being questioned in both Russia and the West, making this an appropriate moment to revisit that first flight.
